Metabolic Pathways

Inborn Errors of Metabolism

The Triple Quadrupole Tandem Mass Spectrometer

Inborn Errors Of Metabolism

HPLC/
spectrophotometry

- **Amino acids**
 - ▣ PKU, MSUD, Urea cycle defects

GC/MS

- **Organic acids**
 - ▣ Methylmalonic acidemia, propionic acidemia

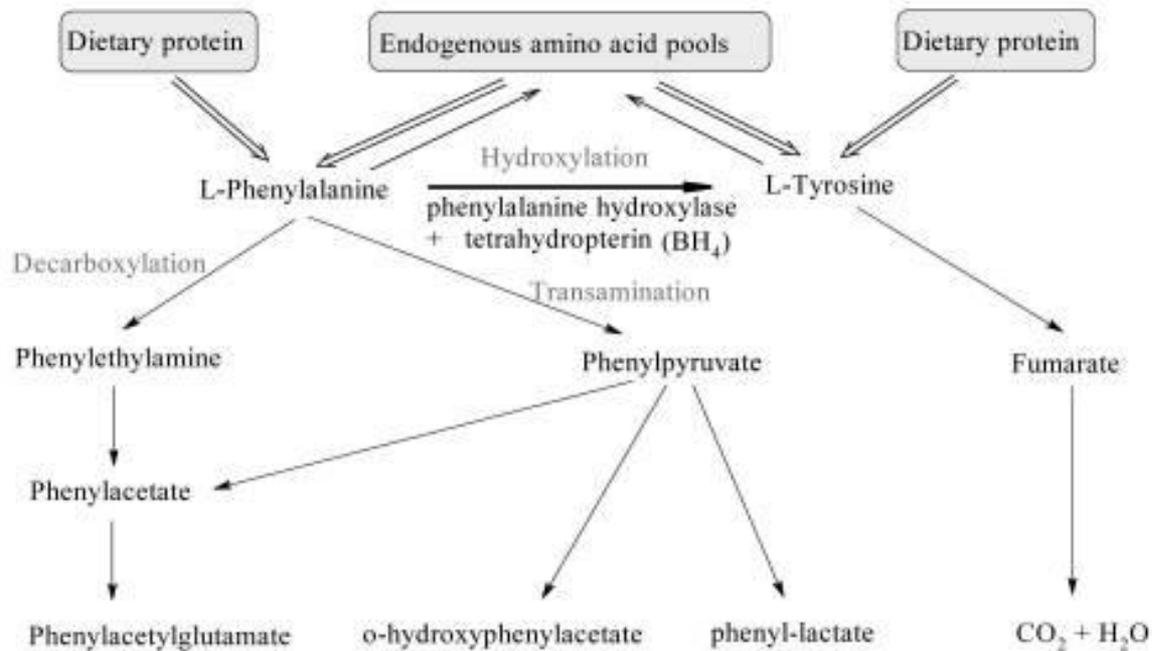

MS/MS

- **Fatty acids**
 - ▣ MCAD, VLCAD

Enzyme assays

- **Organelles**
 - ▣ Lysosomal storage diseases
 - ▣ Mitochondrial myopathies
 - ▣ Peroxisomal disorders

PKU: An Inherited Disorder of Phenylalanine Metabolism

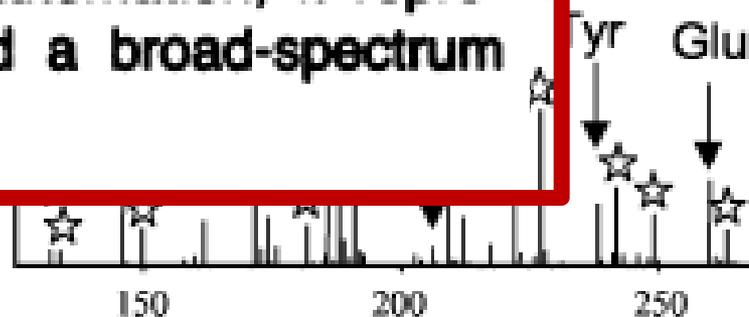

Rapid Diagnosis of Phenylketonuria by Quantitative Analysis for Phenylalanine and Tyrosine in Neonatal Blood Spots by Tandem Mass Spectrometry

Donald H. Chace,¹ David S. Millington,¹ Naoto Terada,² Stephen G. Kahler,¹ Charles R. Roe,¹ and Lindsay F. Hofman³

Because the mass-spectrometric method also recognizes other aminoacidemias simultaneously and is capable of automation, it represents a useful development toward a broad-spectrum neonatal screening method.

metric method also recognizes other aminoacidemias simultaneously and is capable of automation, it represents a useful development toward a broad-spectrum neonatal screening method.

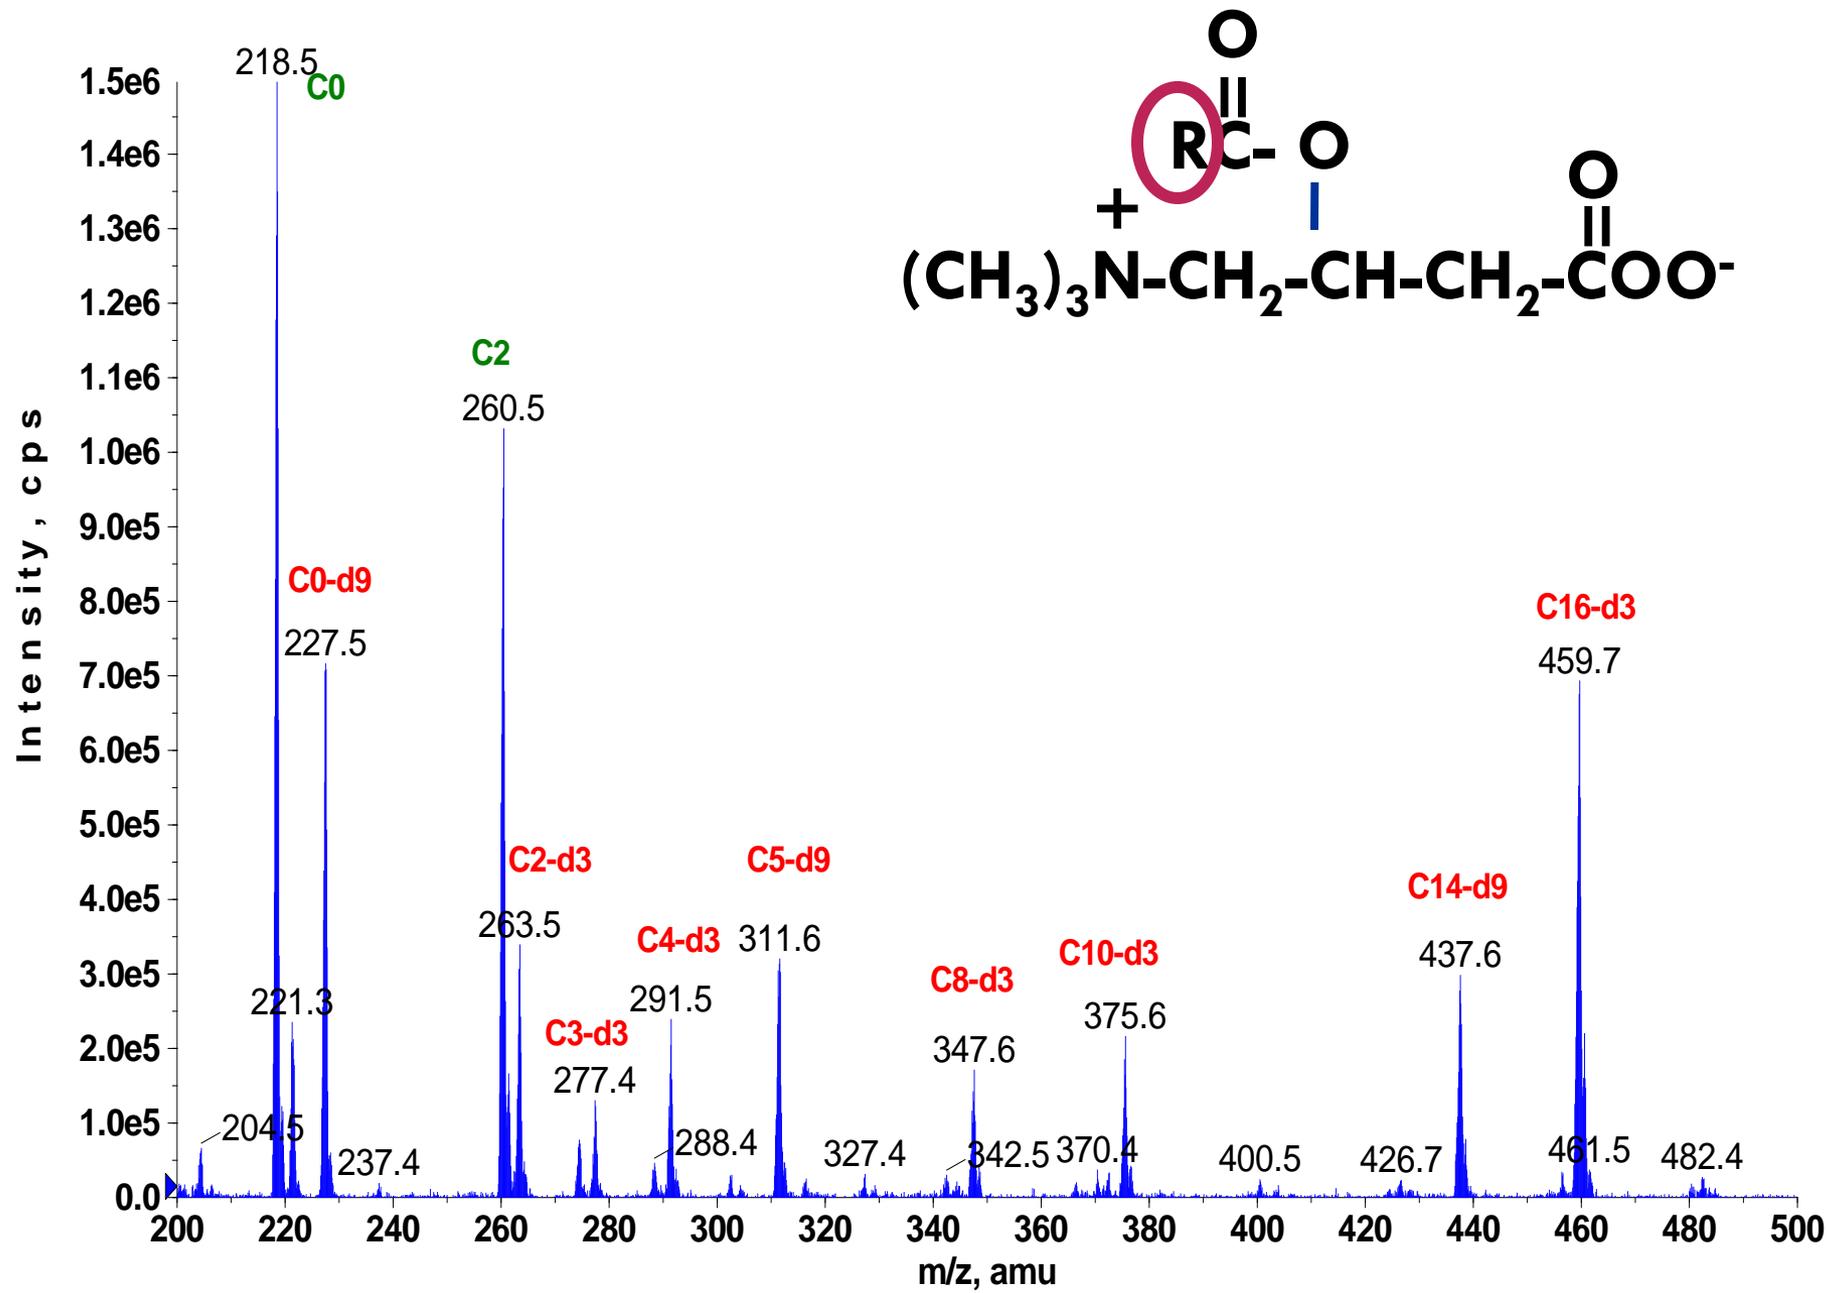

Neutral loss (m/z 102)

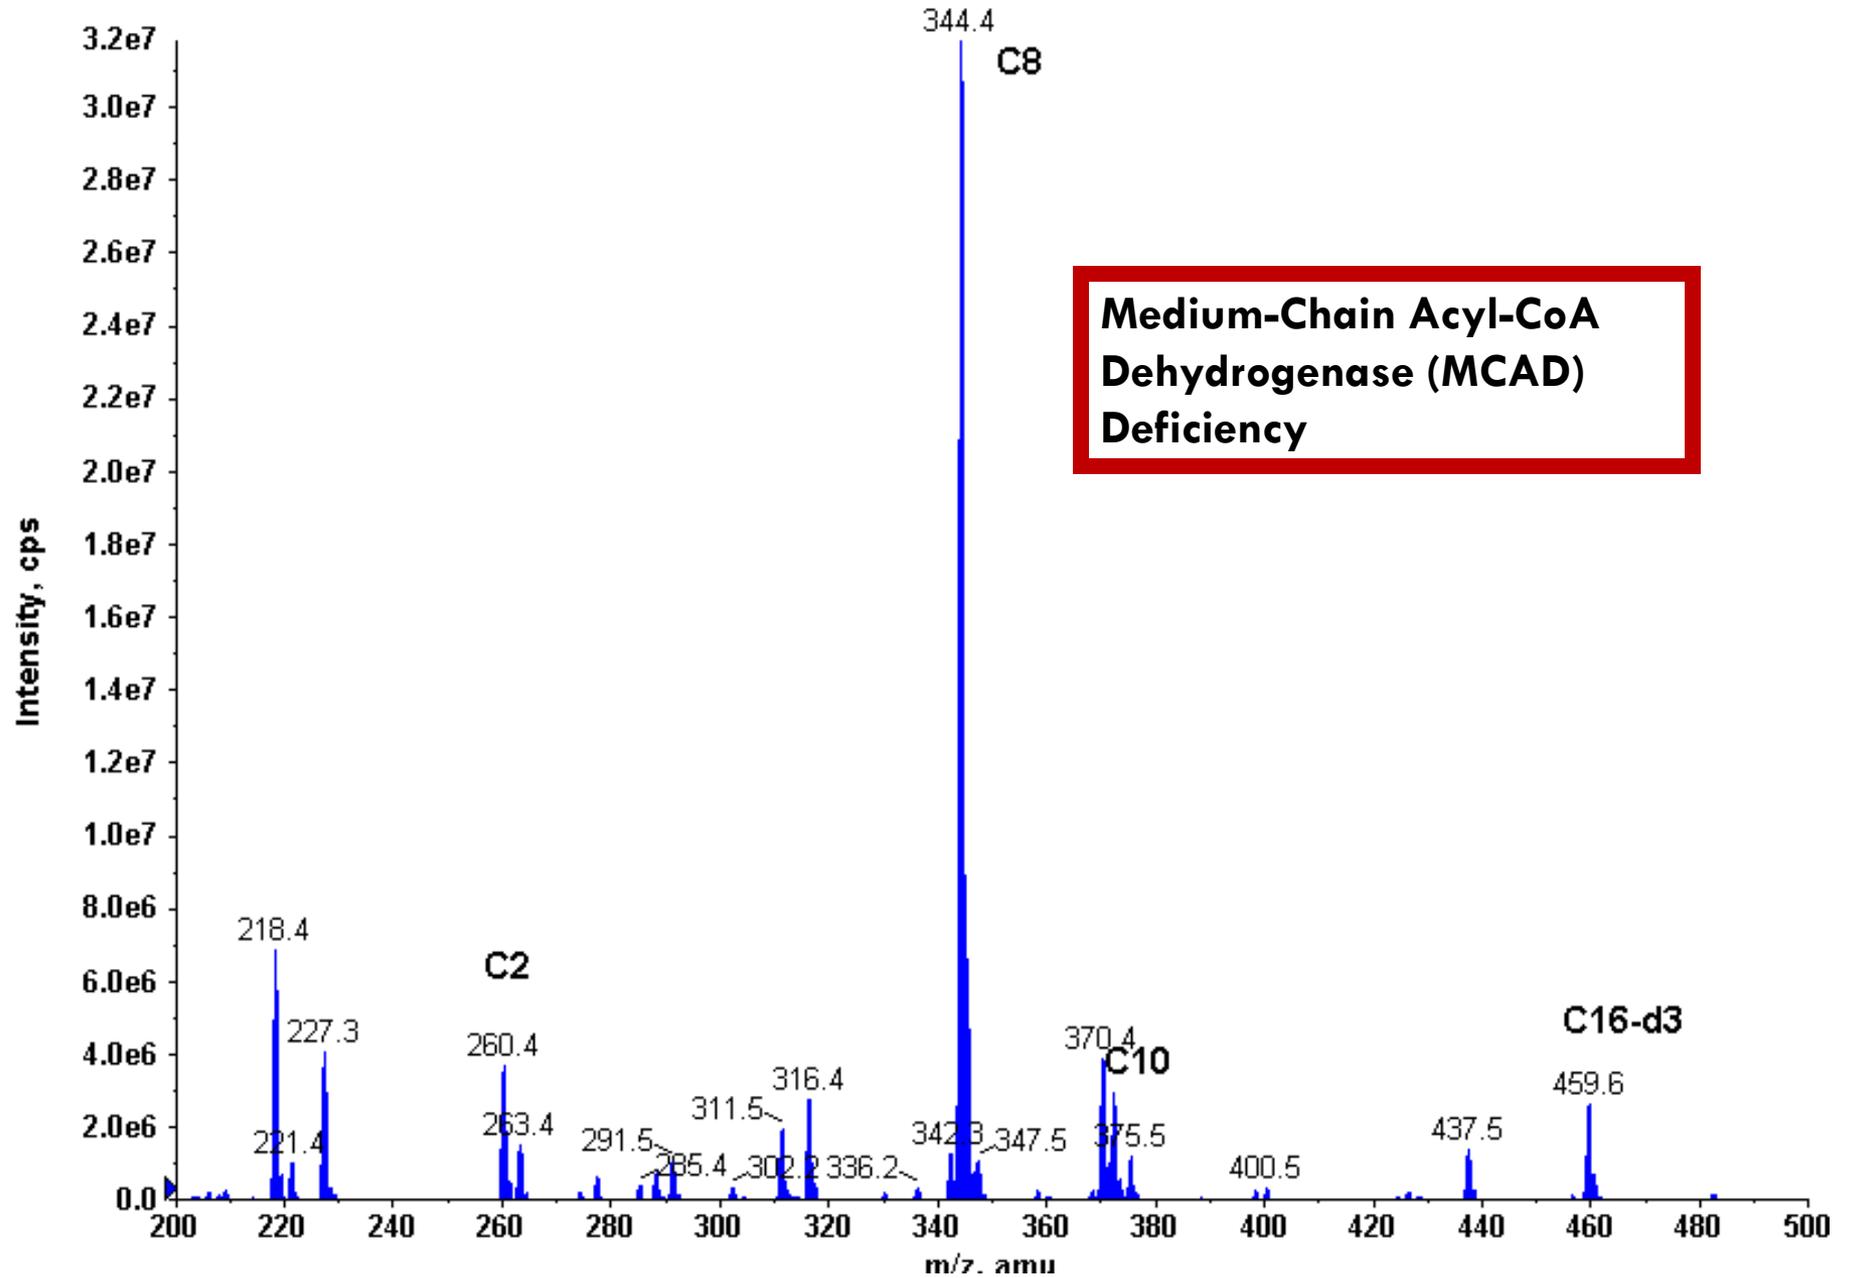

Acylcarnitine Profile: precursors of m/z 85

+Precursor (85.0): 28 MCA scans from Sample 6 (H38870 Asa-Nunies, W) of Data081004.wiff

Max. 1.5e6 cps.

Acylcarnitine Profile: precursors of m/z 85

Evolution of Clinical Testing by MS/MS

- ▣ **Amino Acids (limited panel)**
- ▣ **Acylcarnitine Profile**
- ▣ **Single analyte determinations**
 - **Methylmalonic acid**
 - **Orotic acid**
 - **S-Sulfocysteine**
 - **Guanadinoacetate/creatinine**
 - **Succinylacetone**
 - **Carnitine**
 - **Many more**
- ▣ **Immunosuppressive drugs (e.g., mycophenolic acid)**
- ▣ **Steroid hormones**
- ▣ **Vitamin D**

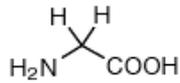

Testing in the Clinical Laboratory

Elements of Method Validation

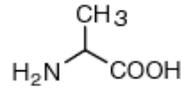

- ▣ **Accuracy**
- ▣ **Precision**
- ▣ **Linearity**
- ▣ **Analytic measurement range**
- ▣ **LLOD, LLOQ**
- ▣ **Recovery or correlation with existing method**

Amino Acid Analysis

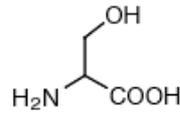

Small

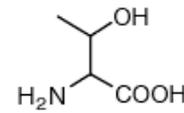

Glycine (Gly, G)
MW: 57.0

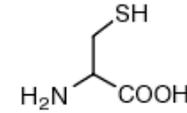

Alanine (Ala, A)

Serine (Ser, S)

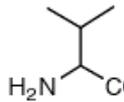

Threonine (Thr, T)

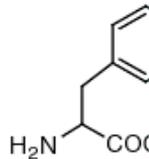

Cysteine (Cys, C)
MW: 121.16, pK_a = 8.35

Hydrophobic

Valine (Val, V)
MW: 99.09

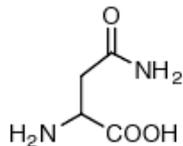

Aromatic

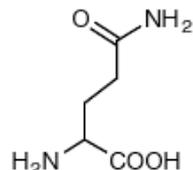

Phenylalanine (Phe, F)
MW: 147.15

Amide

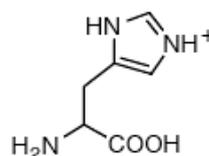

Asparagine (Asn, N)
MW: 114.11

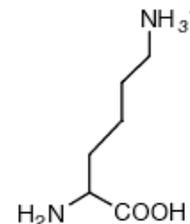

Glutamine (Gln, Q)
MW: 128.14

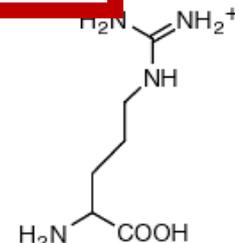

Basic

Histidine (His, H)
MW: 137.14, pK_a = 6.04

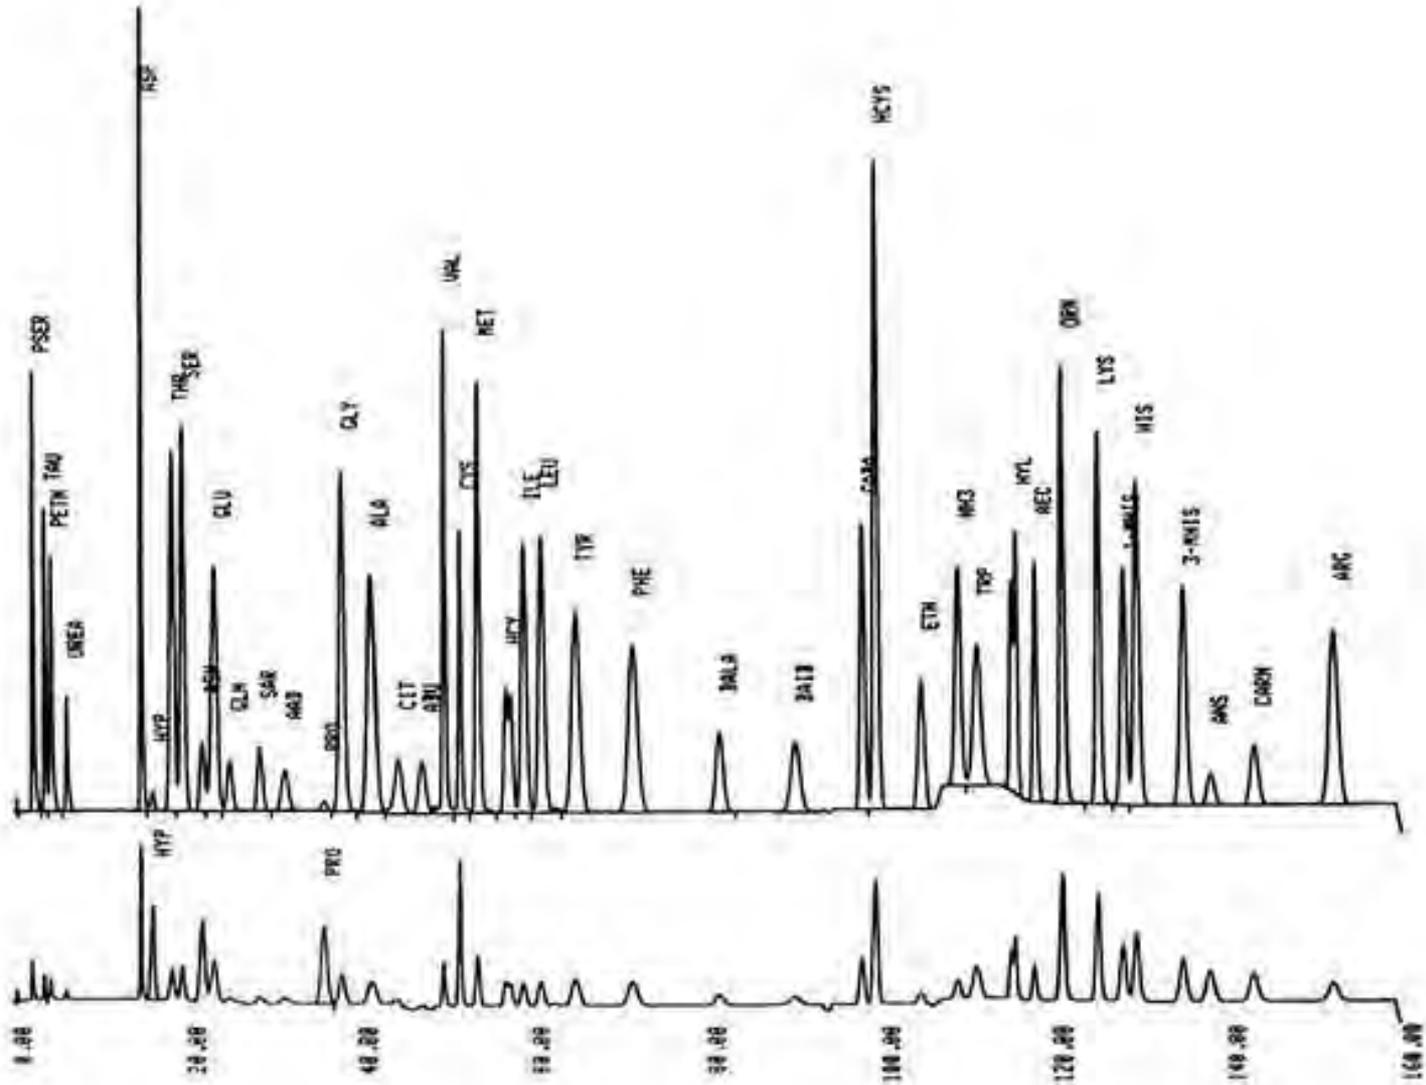

Lysine (Lys, K)
MW: 128.17, pK_a = 10.79

Arginine (Arg, R)
MW: 156.19, pK_a = 12.48

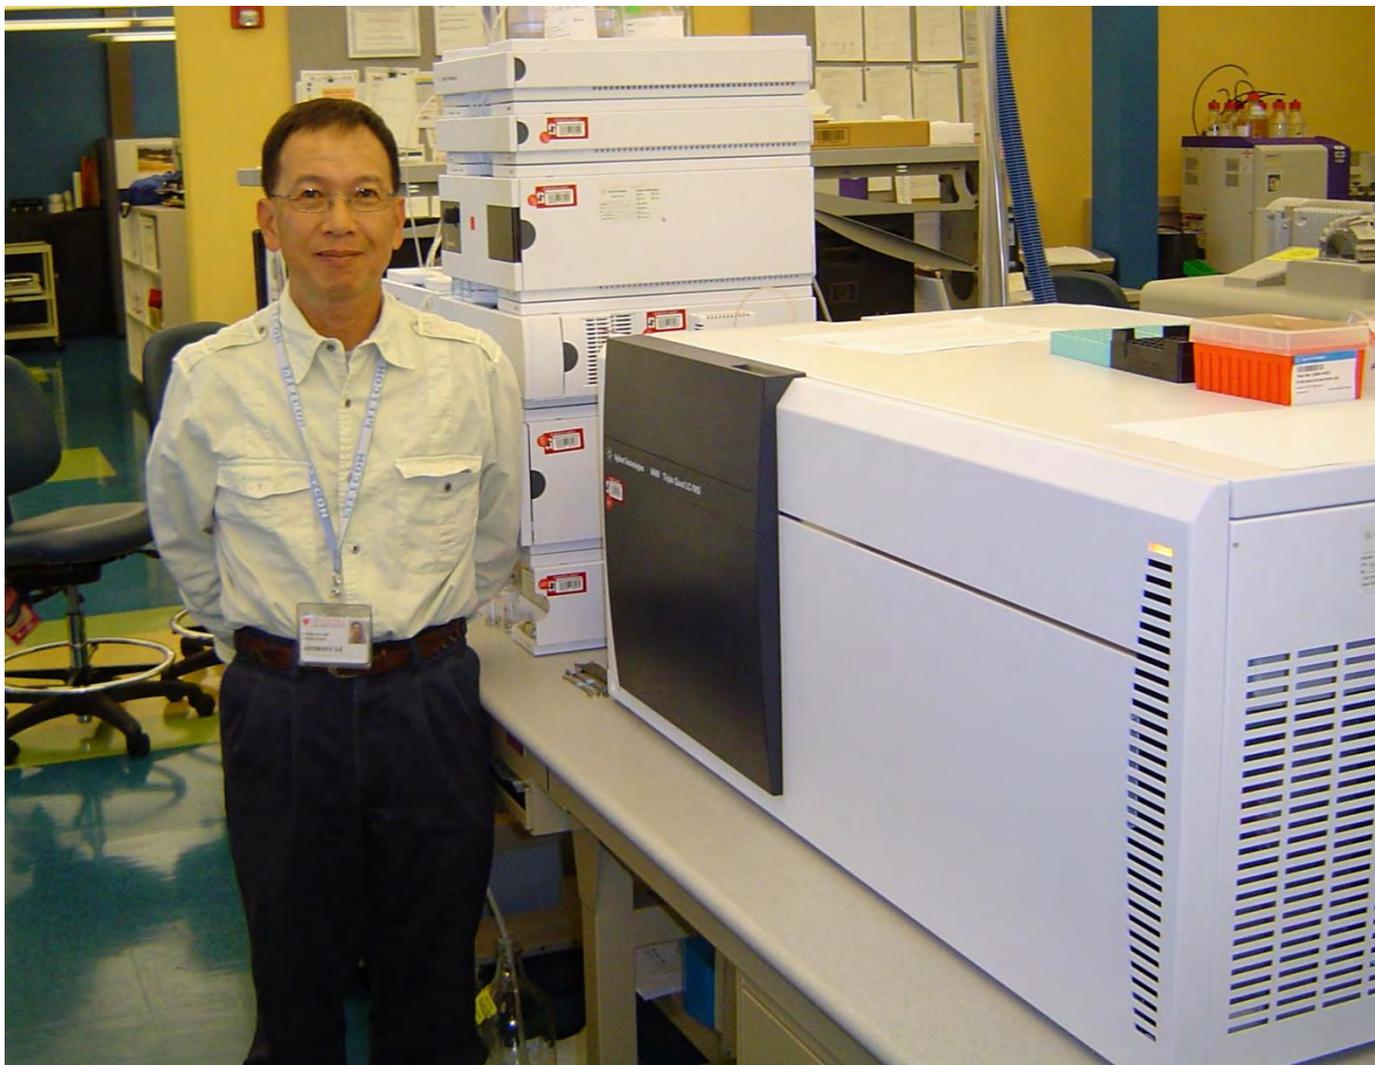

Amino Acid Chromatogram

PHYSIOLOGICAL: EXPANDED
LI-A/D/E/F 25CM COLUMN
VER 1.2
ANALYTICAL REPORT

Amino Acid Analysis by MS/MS: *Challenges*

- **Separation of isomers (leu, ileu, alloileu)**
- **Chromatographic removal of salts**
- **Availability of standards**
- **Derivatization**
- **Ion suppression**
 - ▣ **Sensitivity**
 - ▣ **Imprecision**

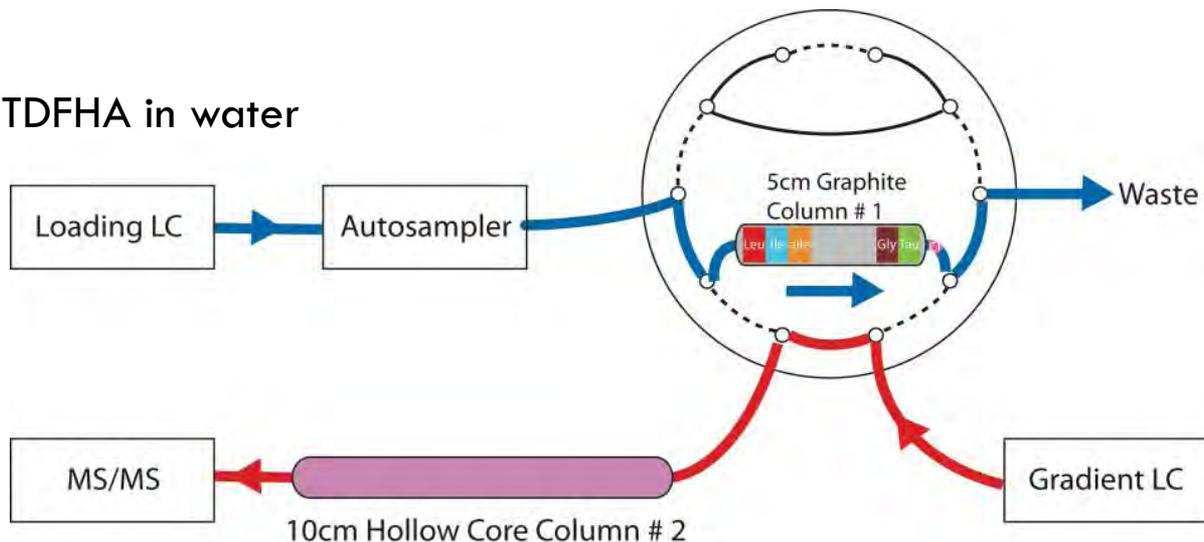

Tony Le, Stanford Biochemical Genetics Laboratory

Amino Acid Analysis: Methods

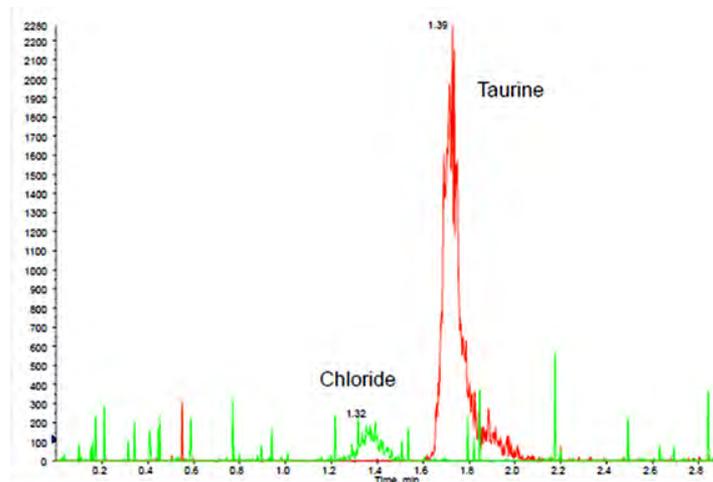

- 1. Plasma, urine, CSF**
- 2. Deproteinize with 6% sulfosalicylic acid (1:1)**
- 3. Incubate at room temperature, 5min**
- 4. Centrifuge at 13,000rpm, 5min**
- 5. Dilute 10 μ L of supernatant with 800 μ L of 2mM tridecafluoroheptanoic acid (TDFHA) containing internal standards glucosaminic acid and s-2-aminoethyl cysteine**
- 6. Transfer to autosampler vials**

Column 1: Porous graphitic carbon (PGC) (3 μ m Hypercarb, 4.6mm ID x 50mm)

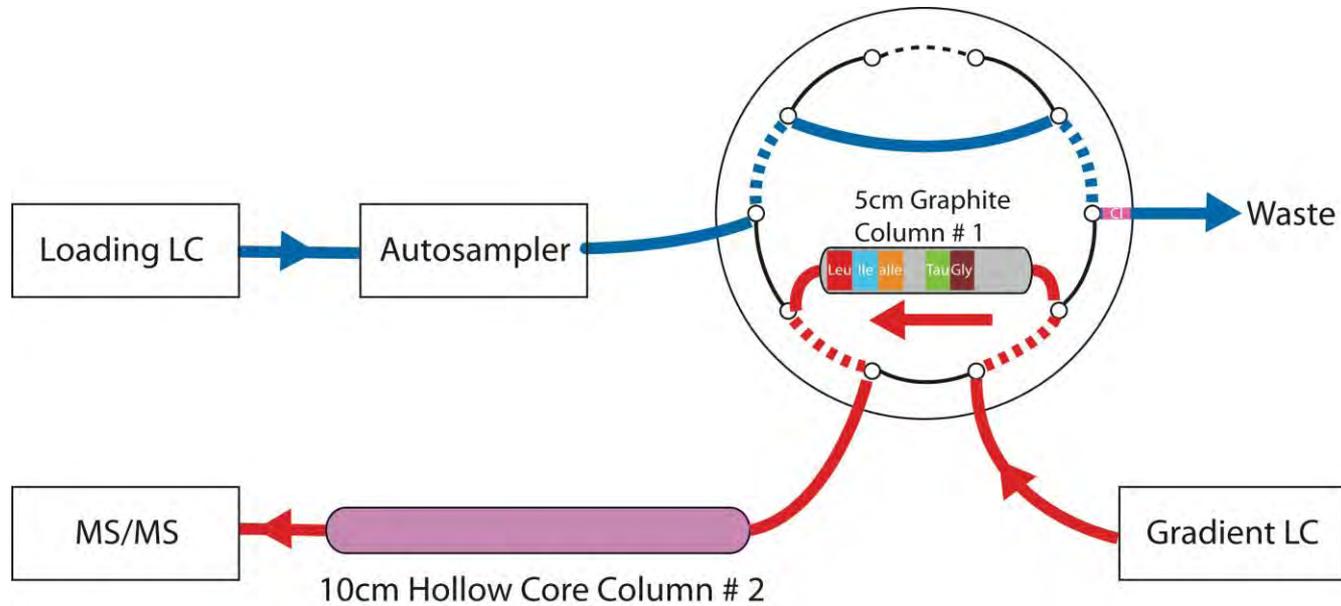

1 mM TDFHA in water

Separation of negatively charged salts from first-eluting amino acid

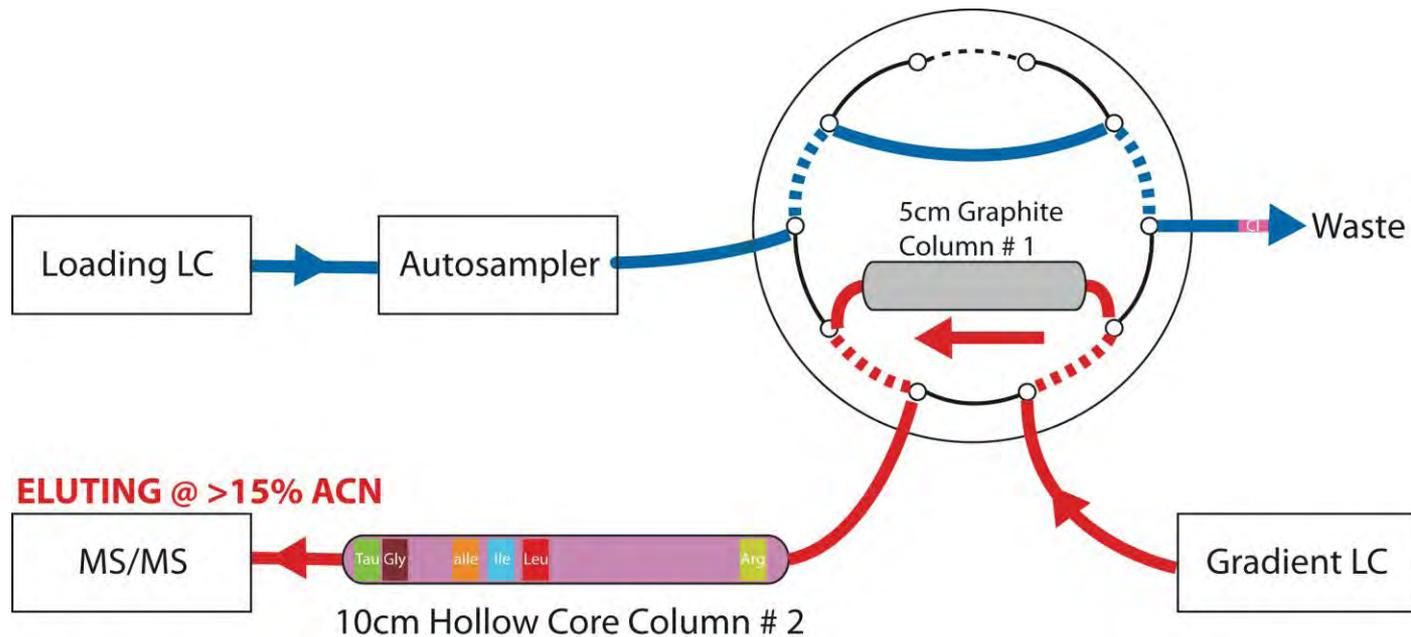

Flow-Reversal of Column 1

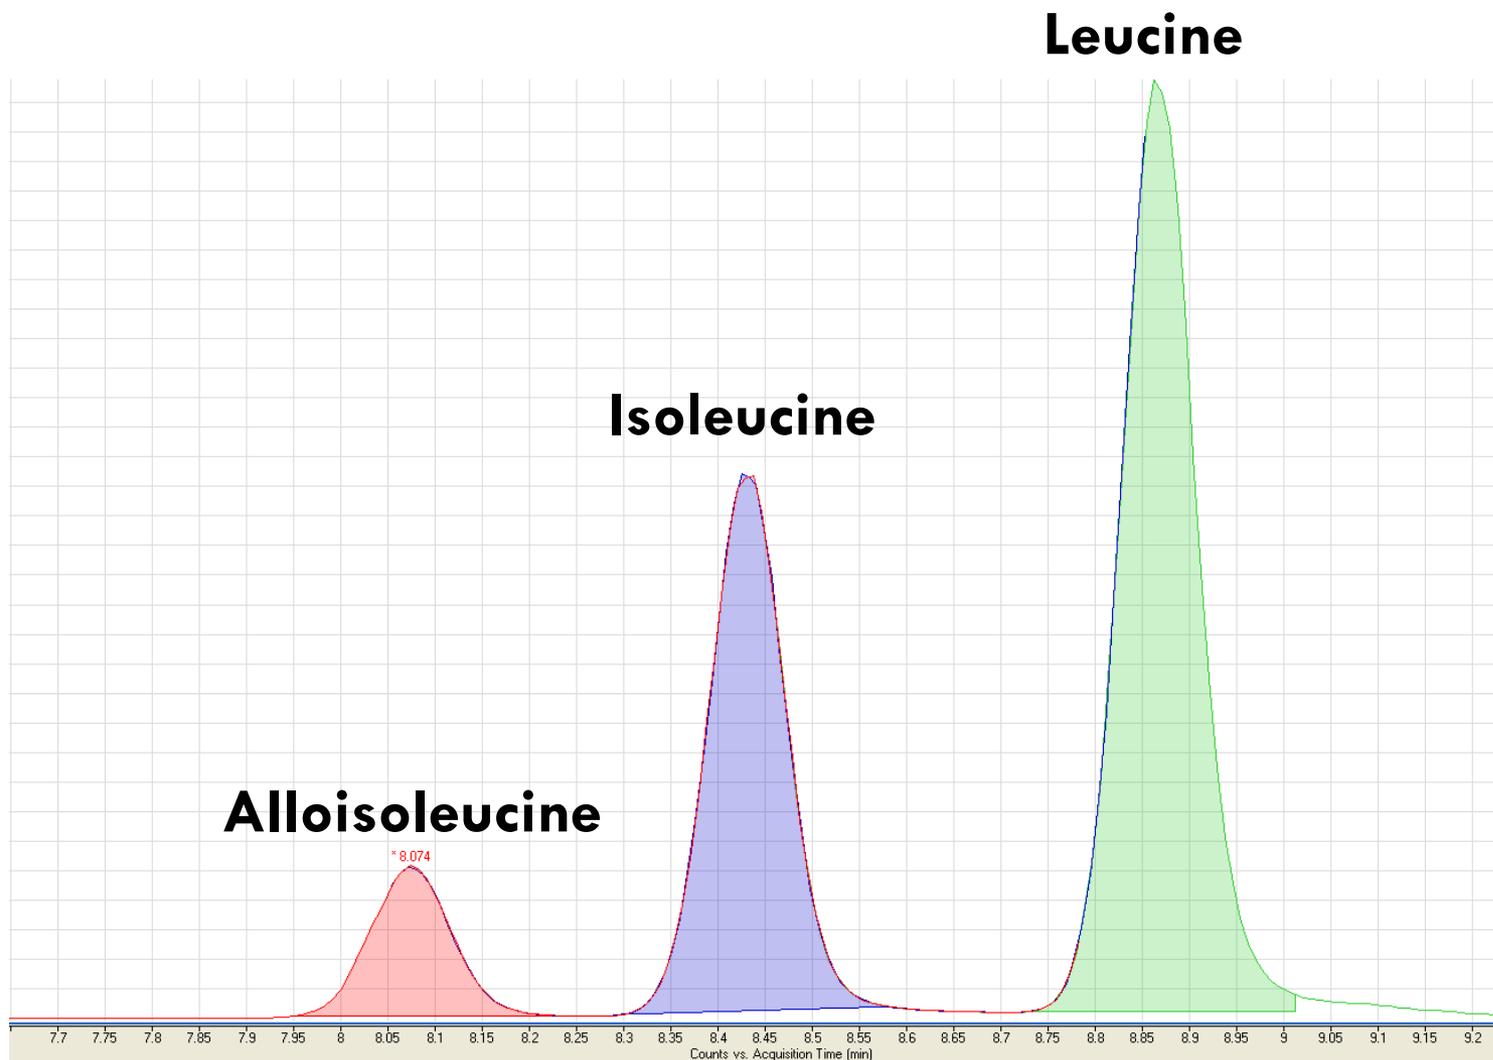

Column 2: Fused-core

(2.7 μ m Halo C18, 2.1mm IDx 100mm), 50°C

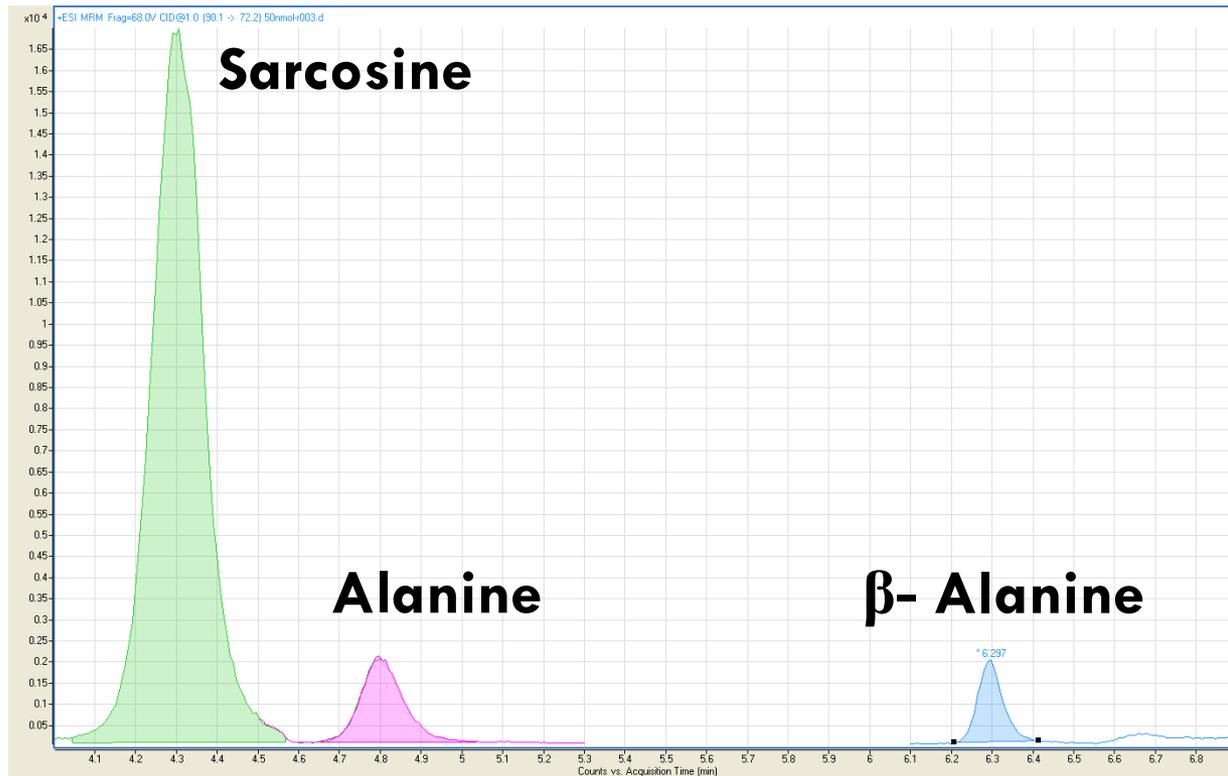

Baseline resolution of leucine isomers

(m/z 132.1 > 86.1)

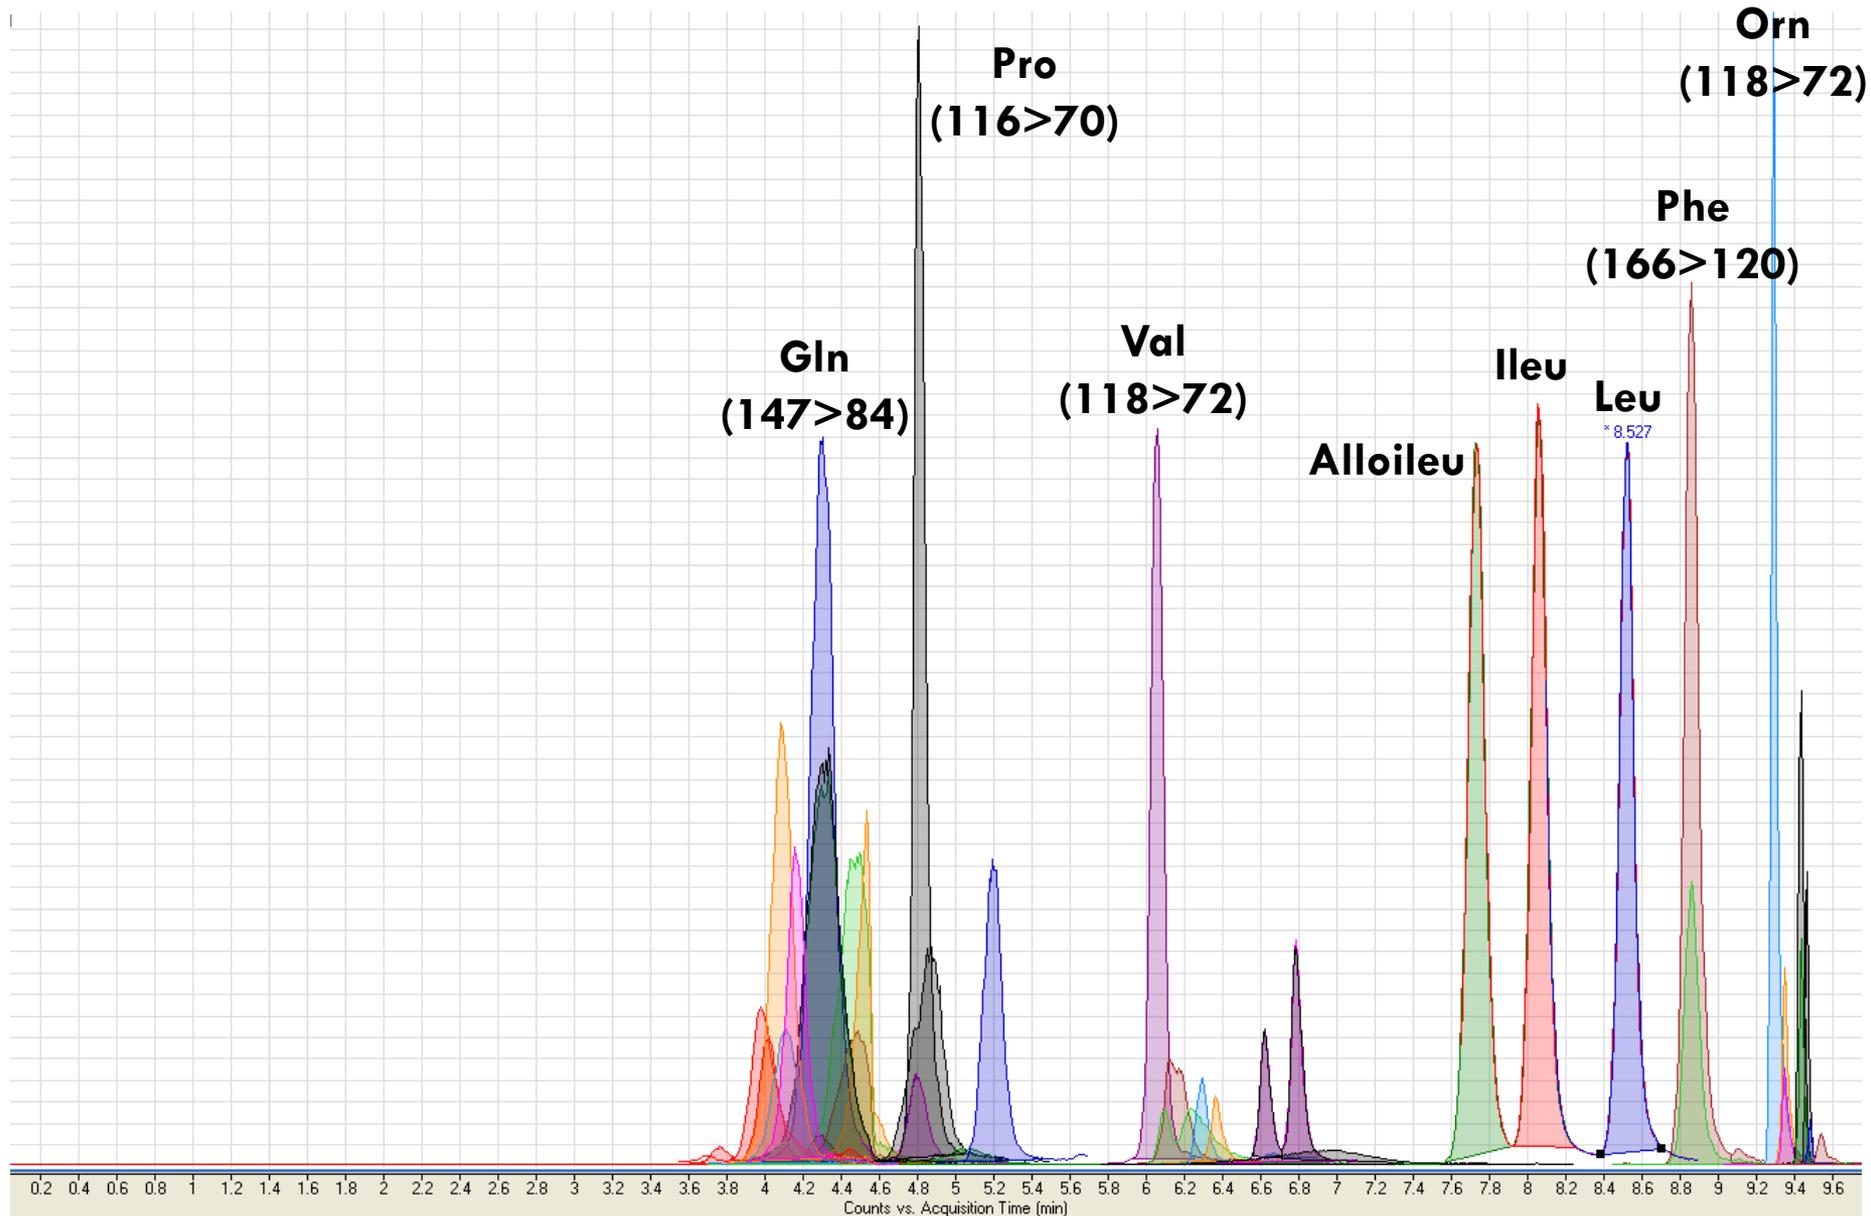

Baseline resolution of sarc and ala

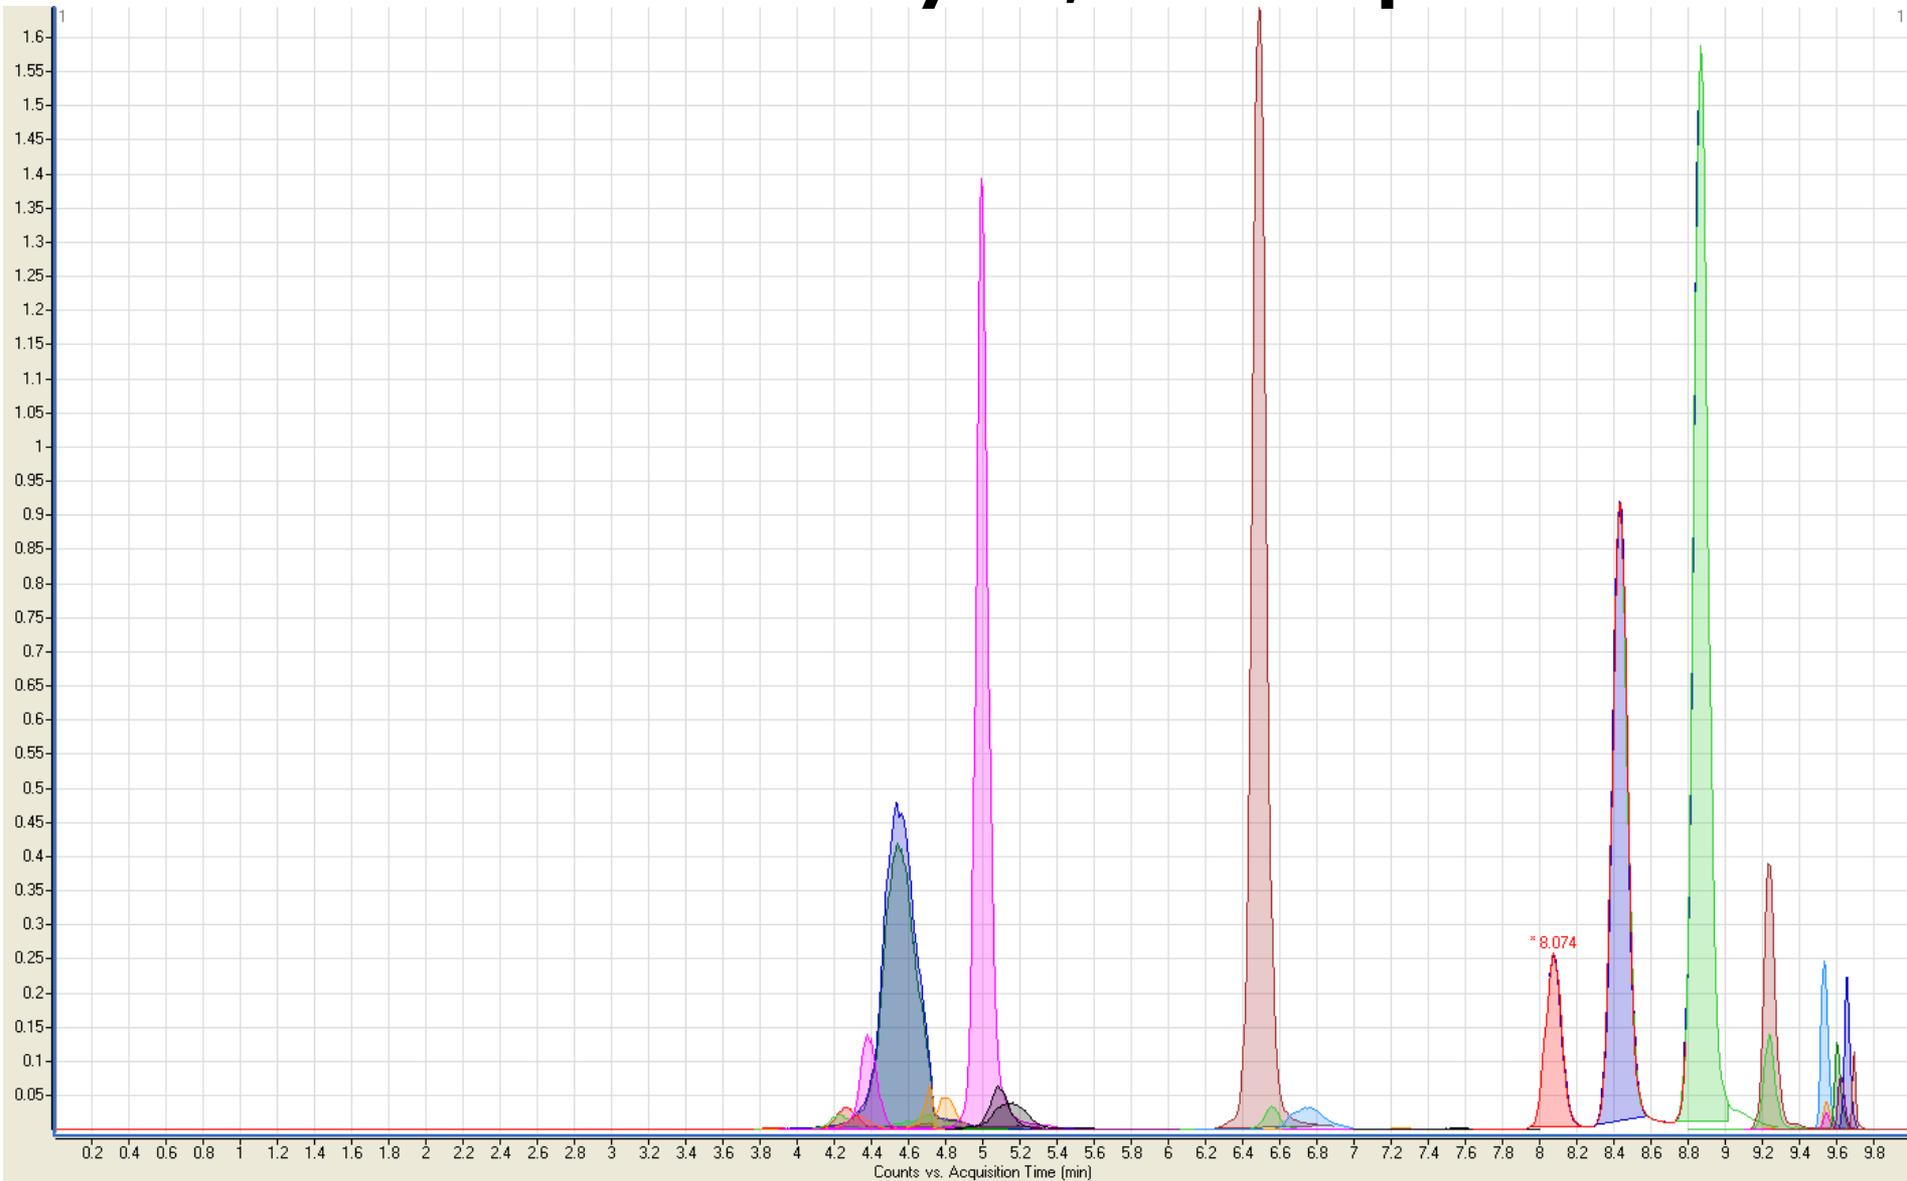

(m/z 90.0 > 44.2)

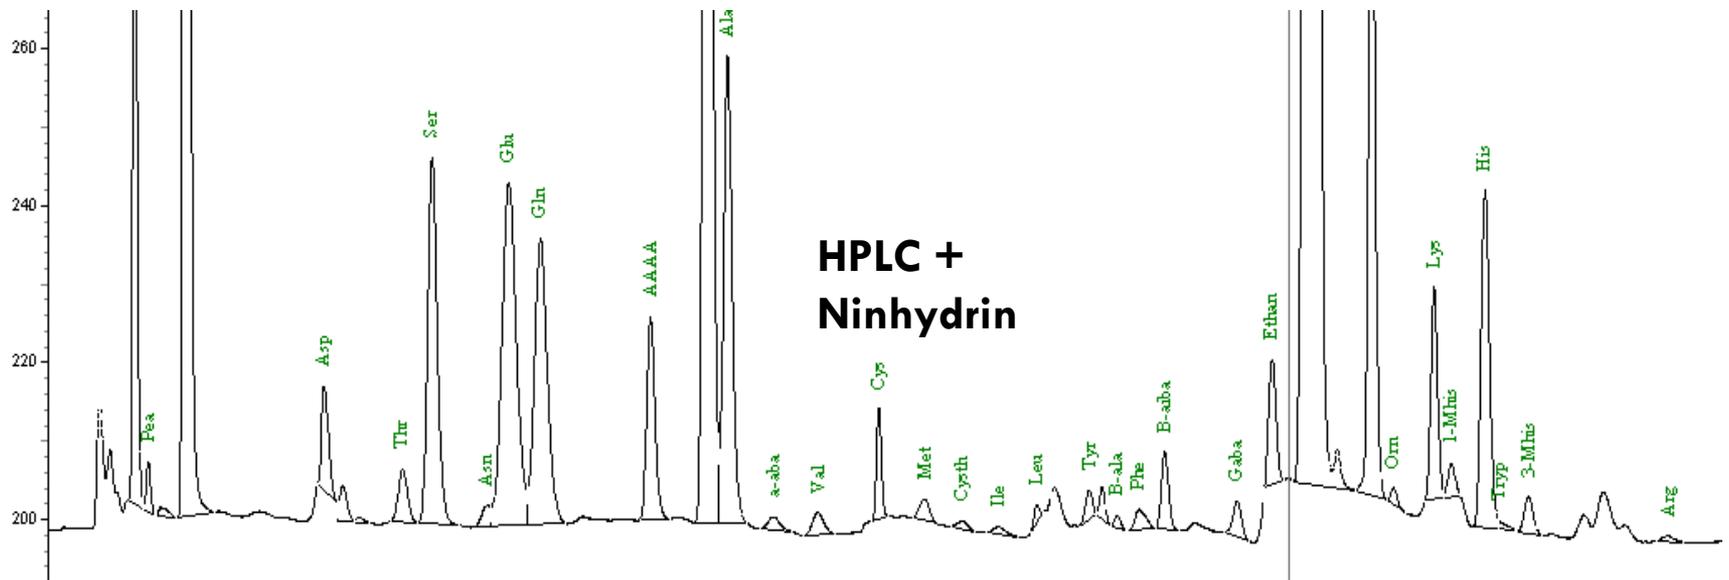

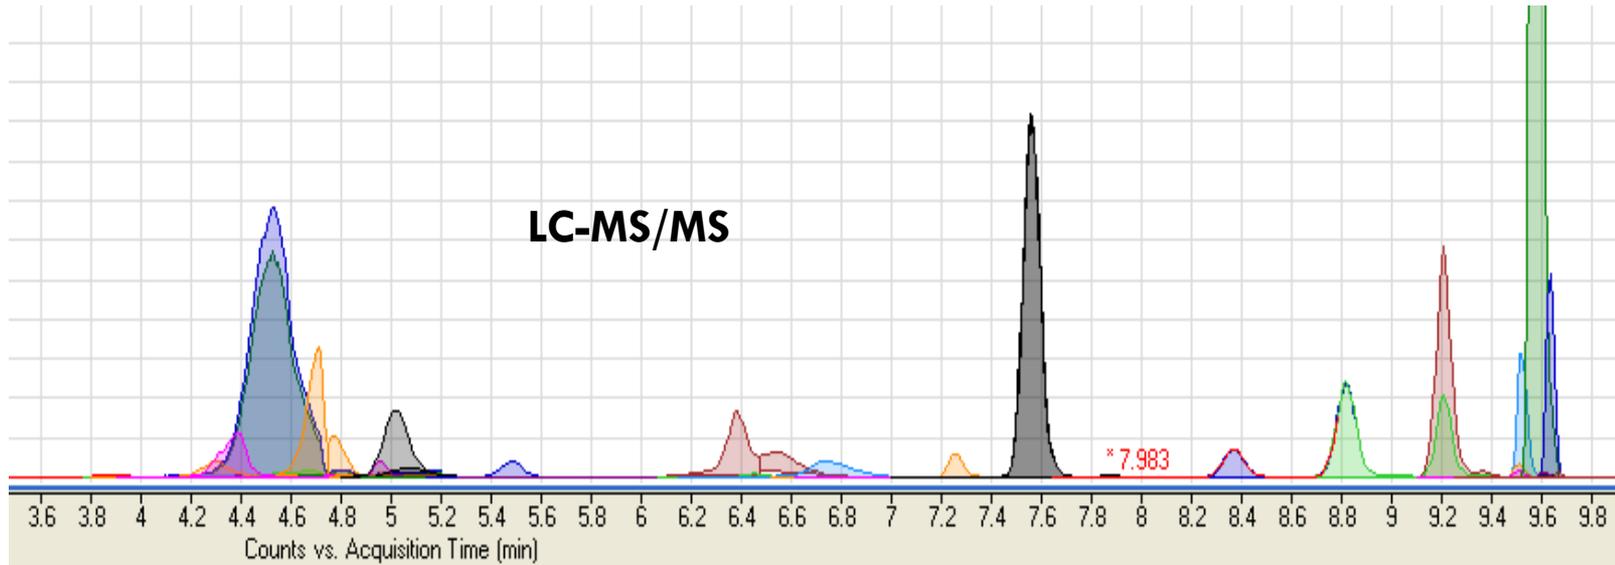

Amino Acid Analysis, 50 nmol standard

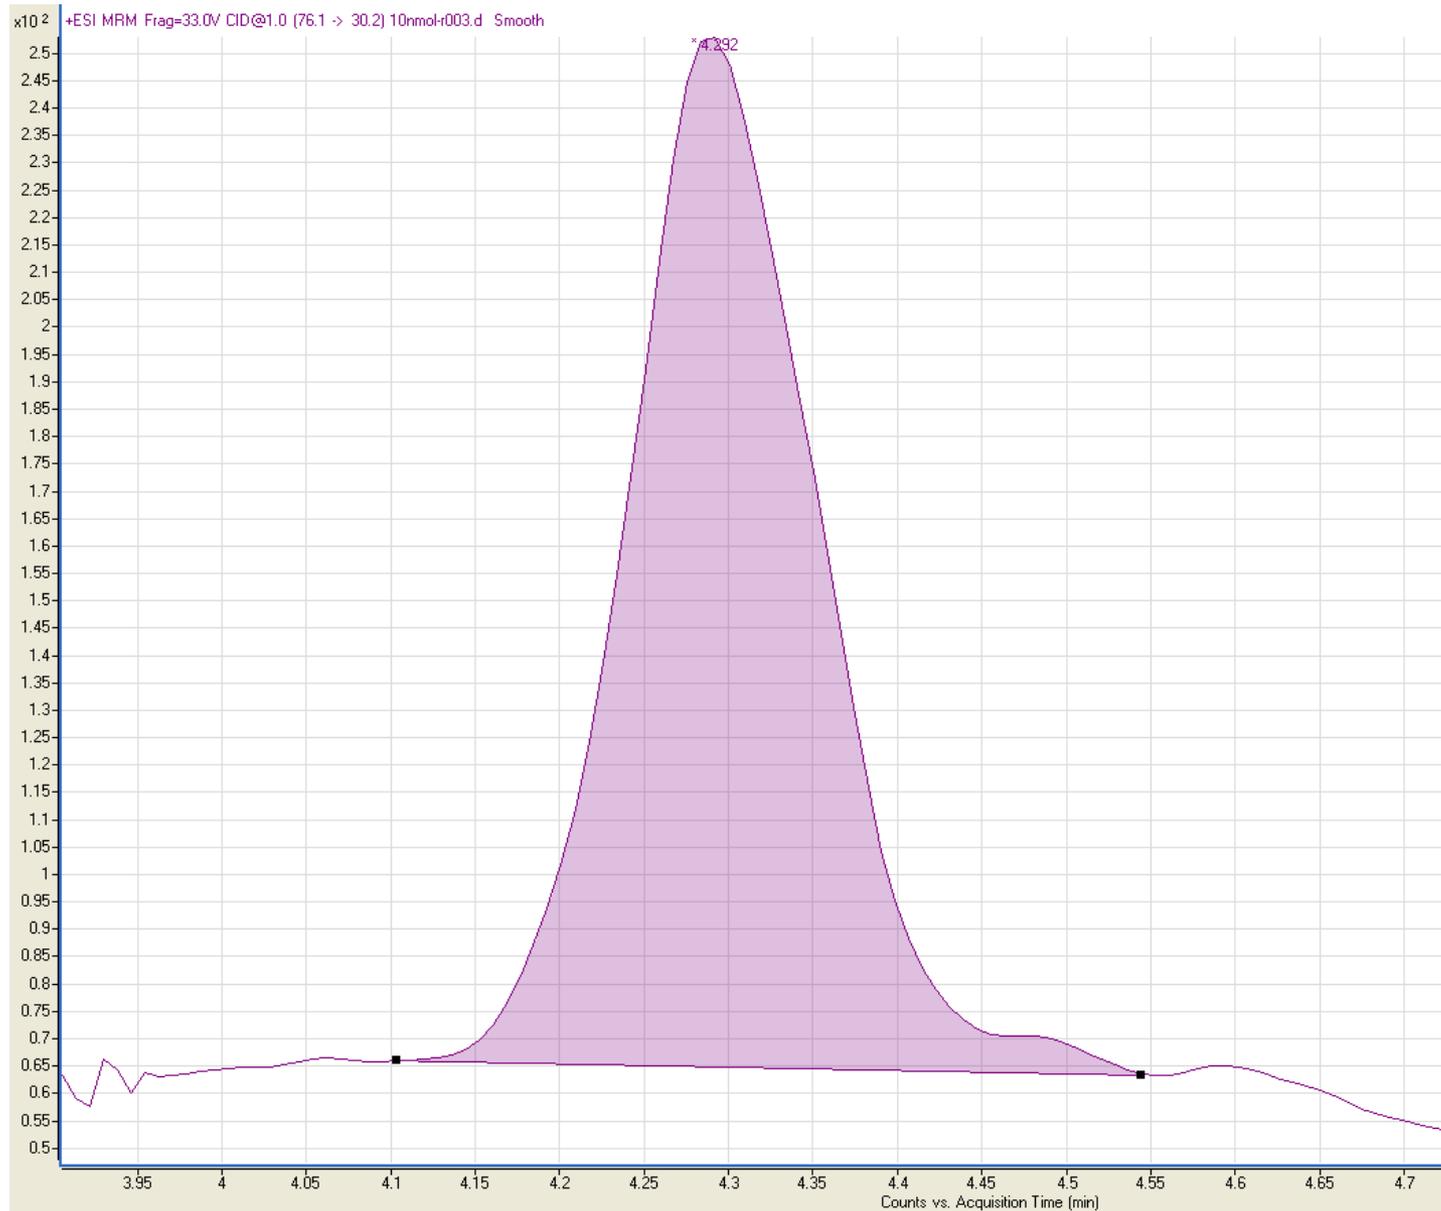

Amino Acid Analysis, MSUD plasma

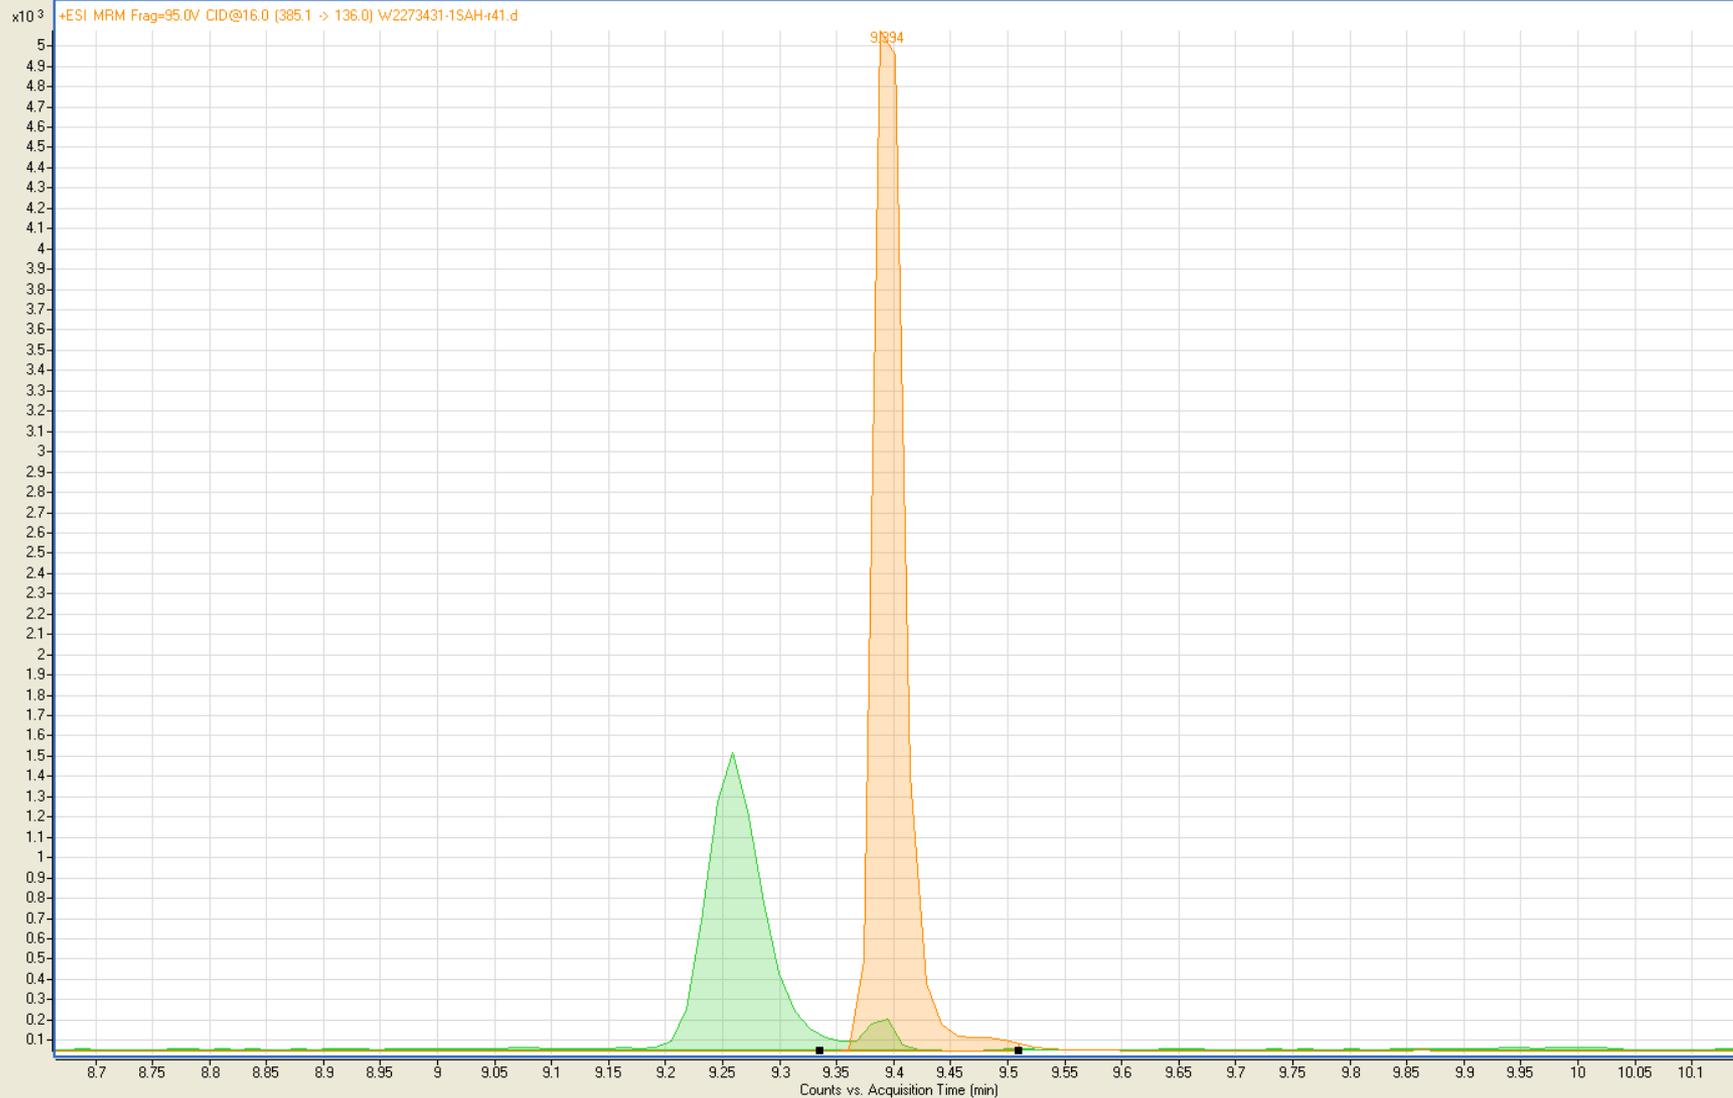

Urine Amino Acid Analysis

Glycine 10 nmol/ml

Adding other compounds: S-adenosylmethionine/S-adenosylhomocysteine

Lessons Learned Along the Way...

- ❑ **Sample preparation matters**
- ❑ **Ion suppression where you least expect it**
- ❑ **Choice of calibration material**
- ❑ **Choice of internal standards**

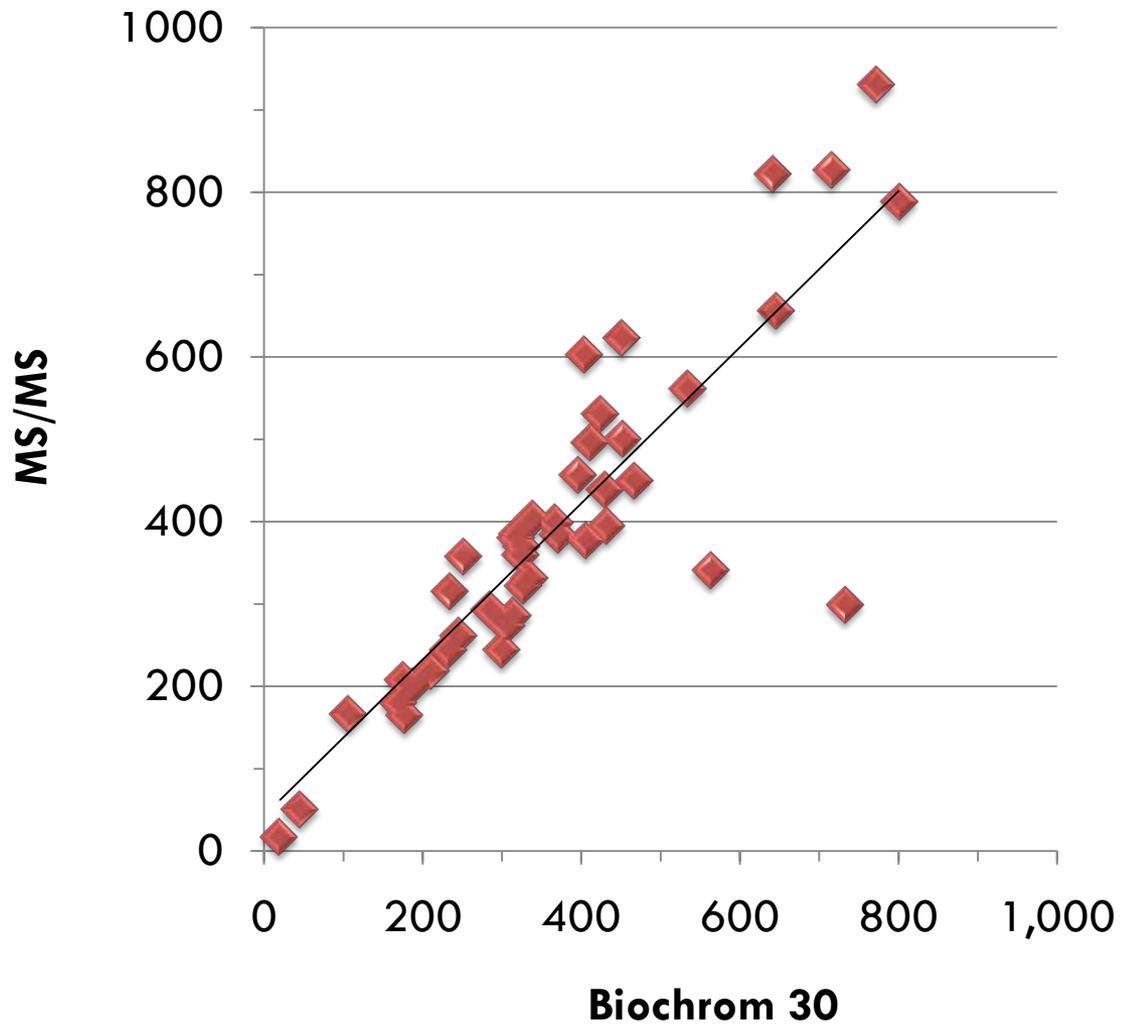

A horizontal bar at the top of the slide, divided into a red section on the left and a blue section on the right. The text is white and centered within the blue section.

Not All Sample Preps Are Created Equal

Plasma Prep 1: Methanol:Acetonitrile (3:1)

$R^2=0.7488$

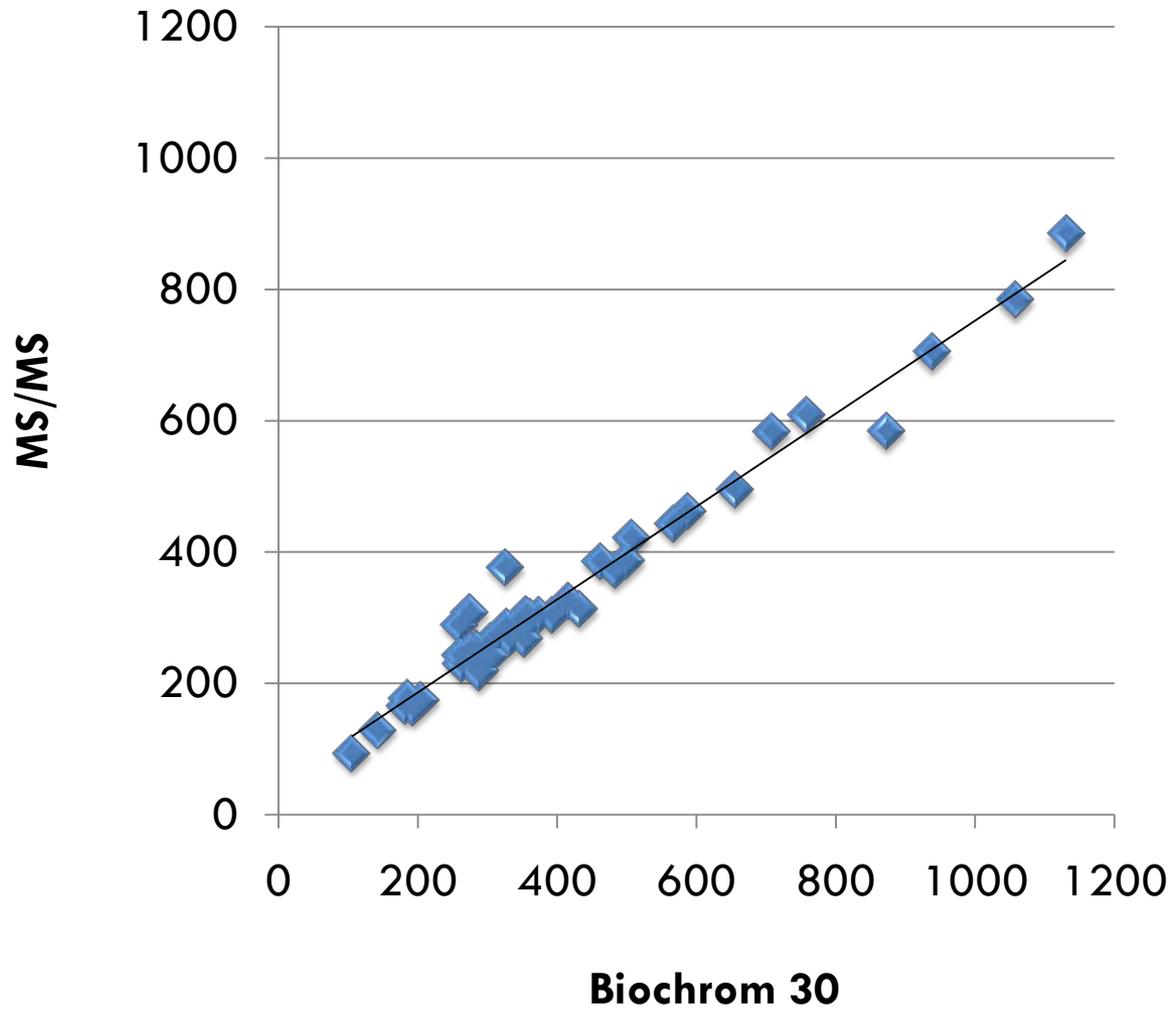

Alanine

Plasma Prep 2: 6% SSA in H₂O

$R^2=0.9702$

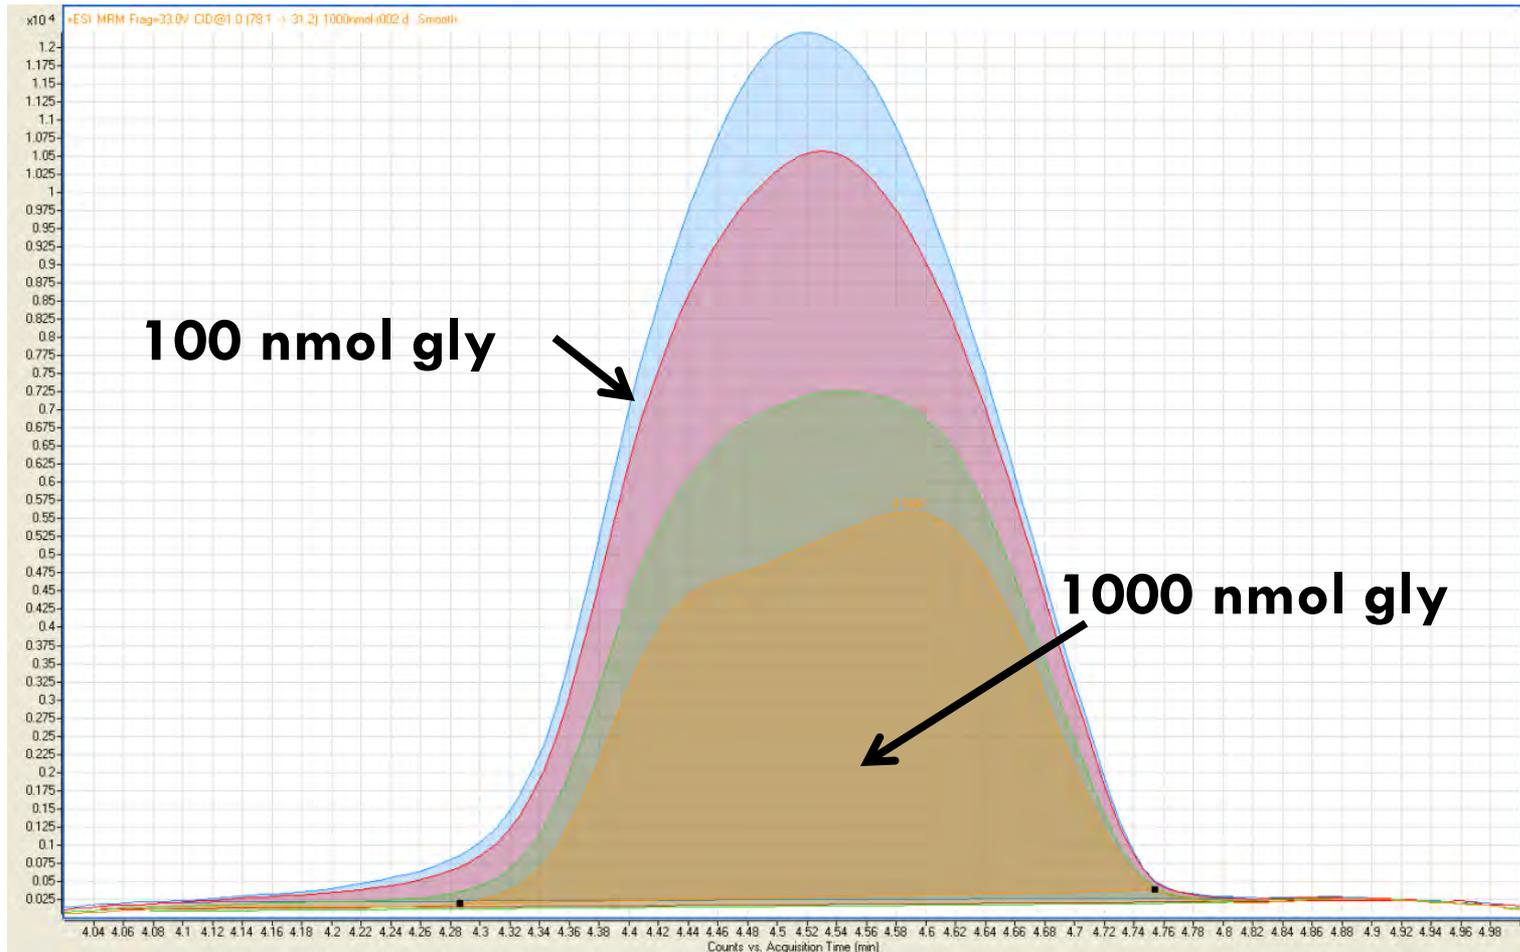

Alanine

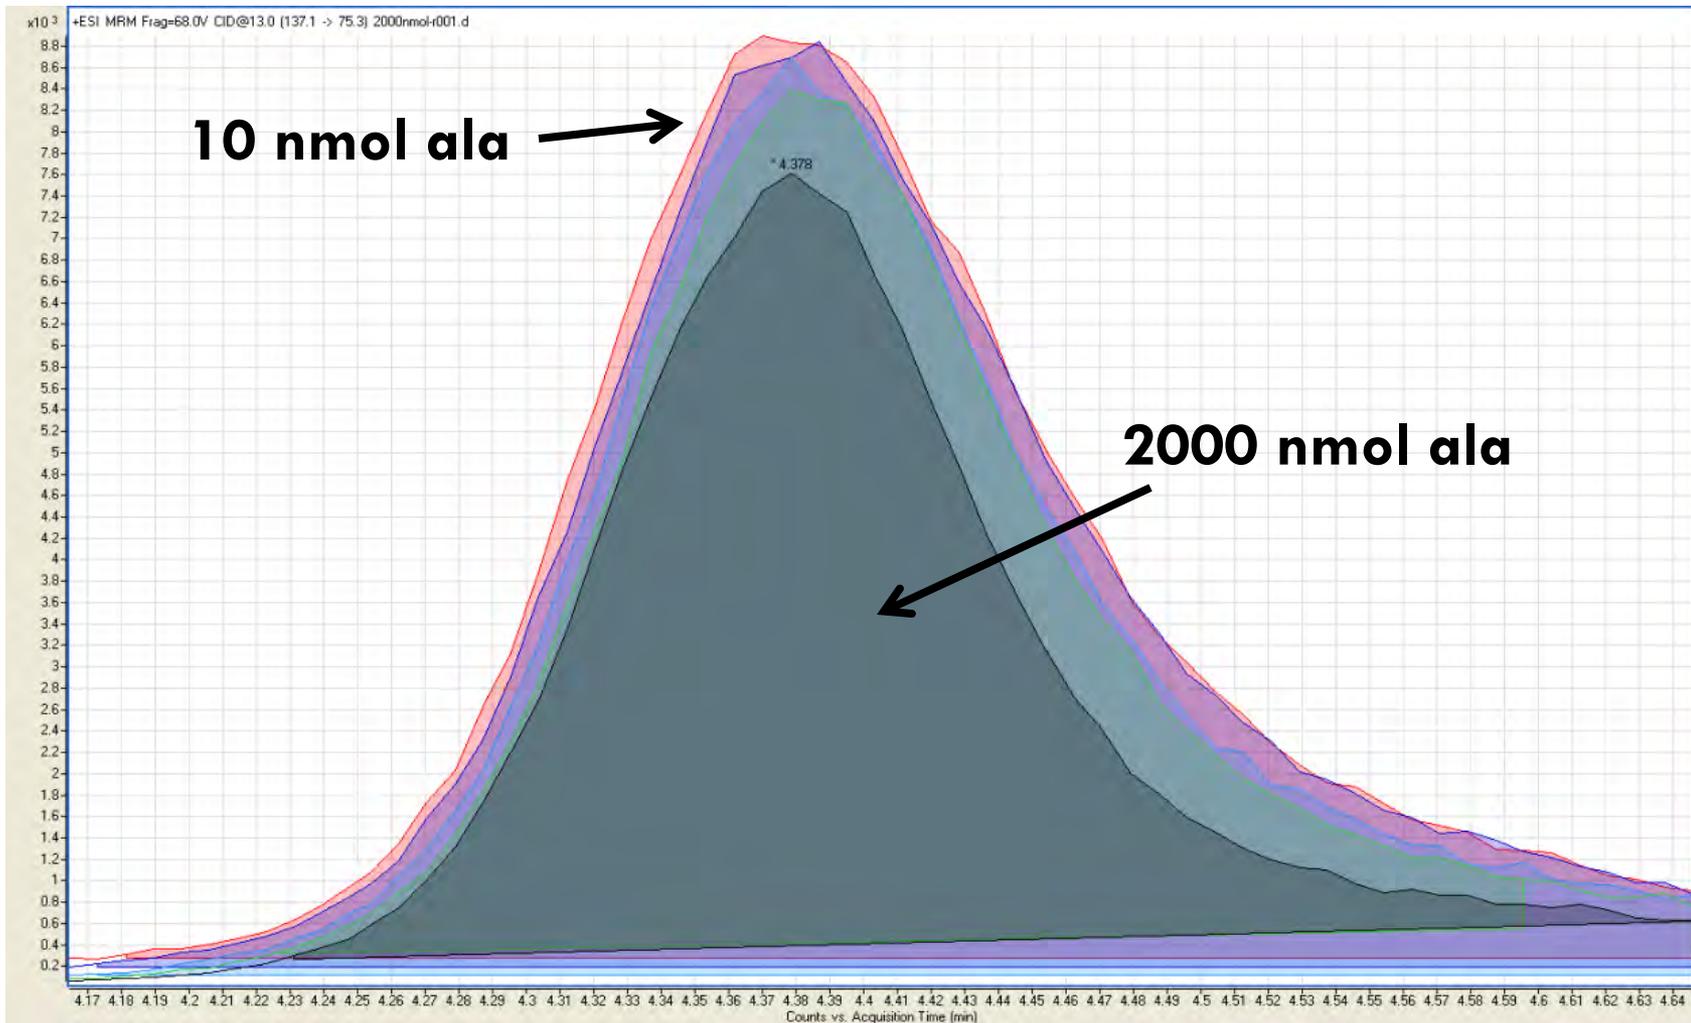

Ion Suppression Where You Least Expect It

Or: Calibration Matters

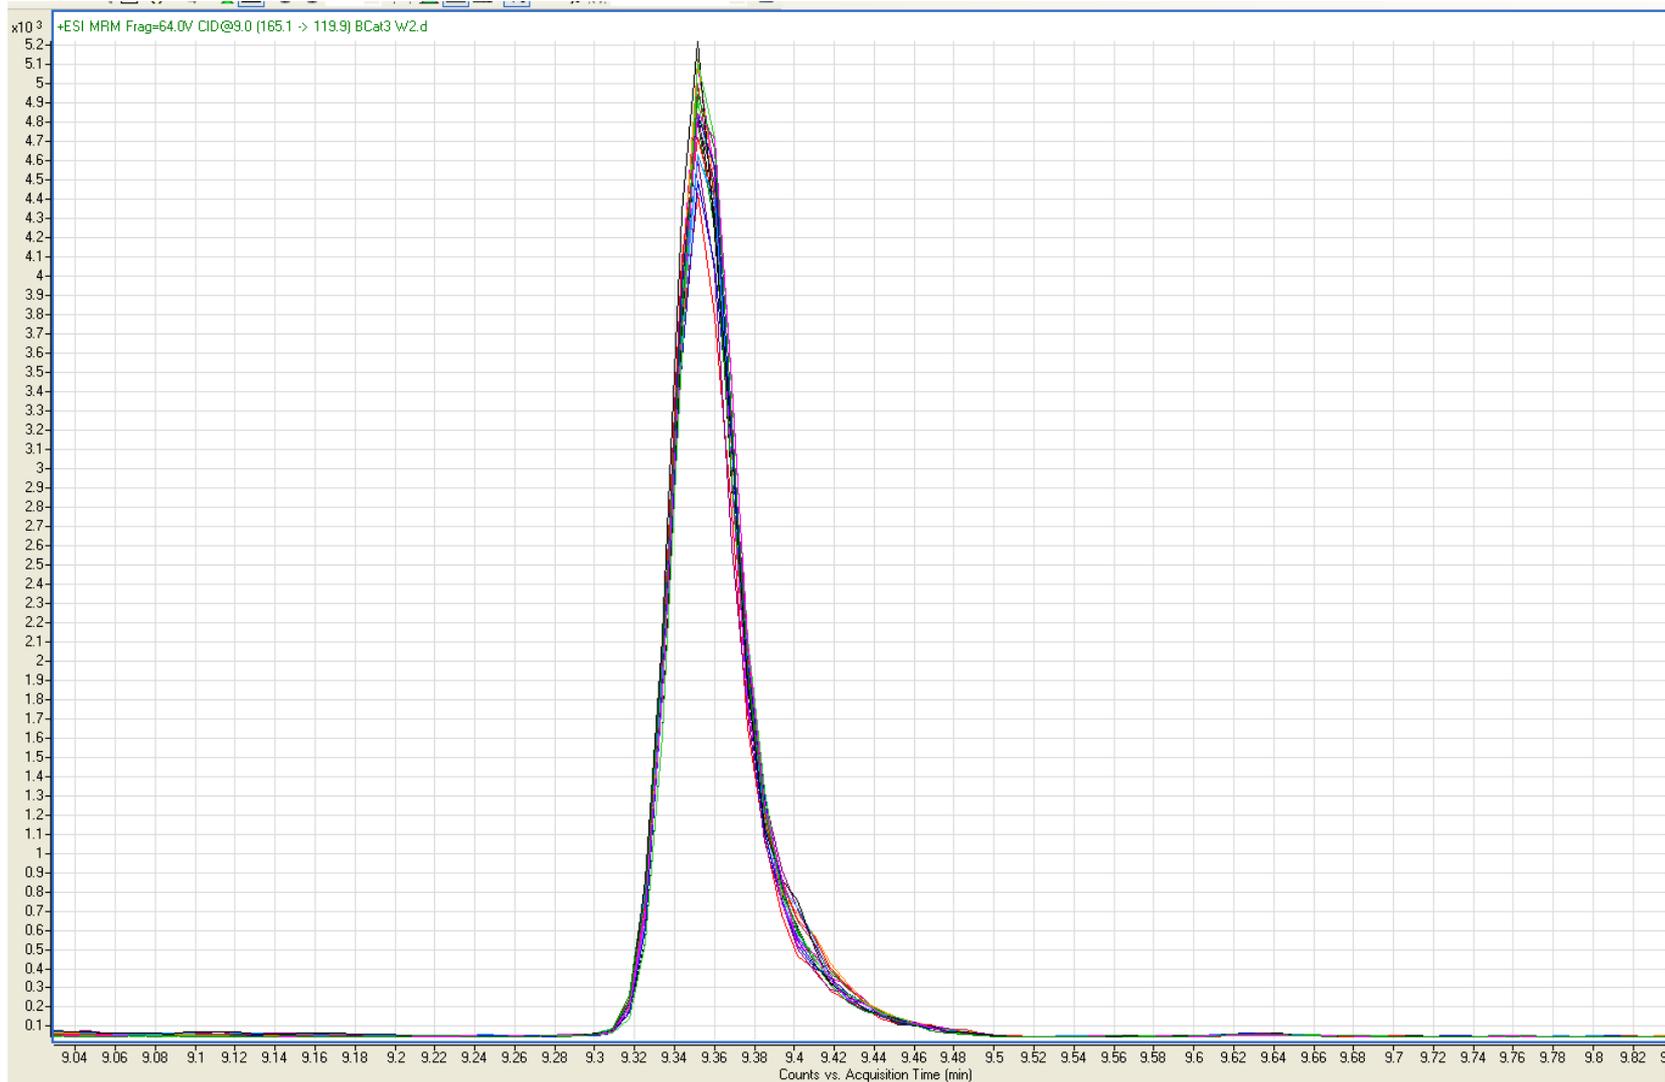

^{15}N - ^{13}C -Glycine Response at Varying Glycine Concentrations

$^2\text{H}_4$ -Alanine Response at Varying Alanine Concentrations

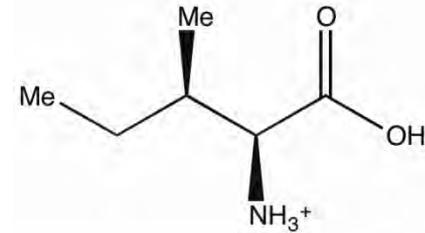

S-aminoethyl-cysteine response at varying amino acid concentrations

A horizontal decorative bar at the top of the slide, consisting of a red rectangular section on the left and a larger blue rectangular section on the right.

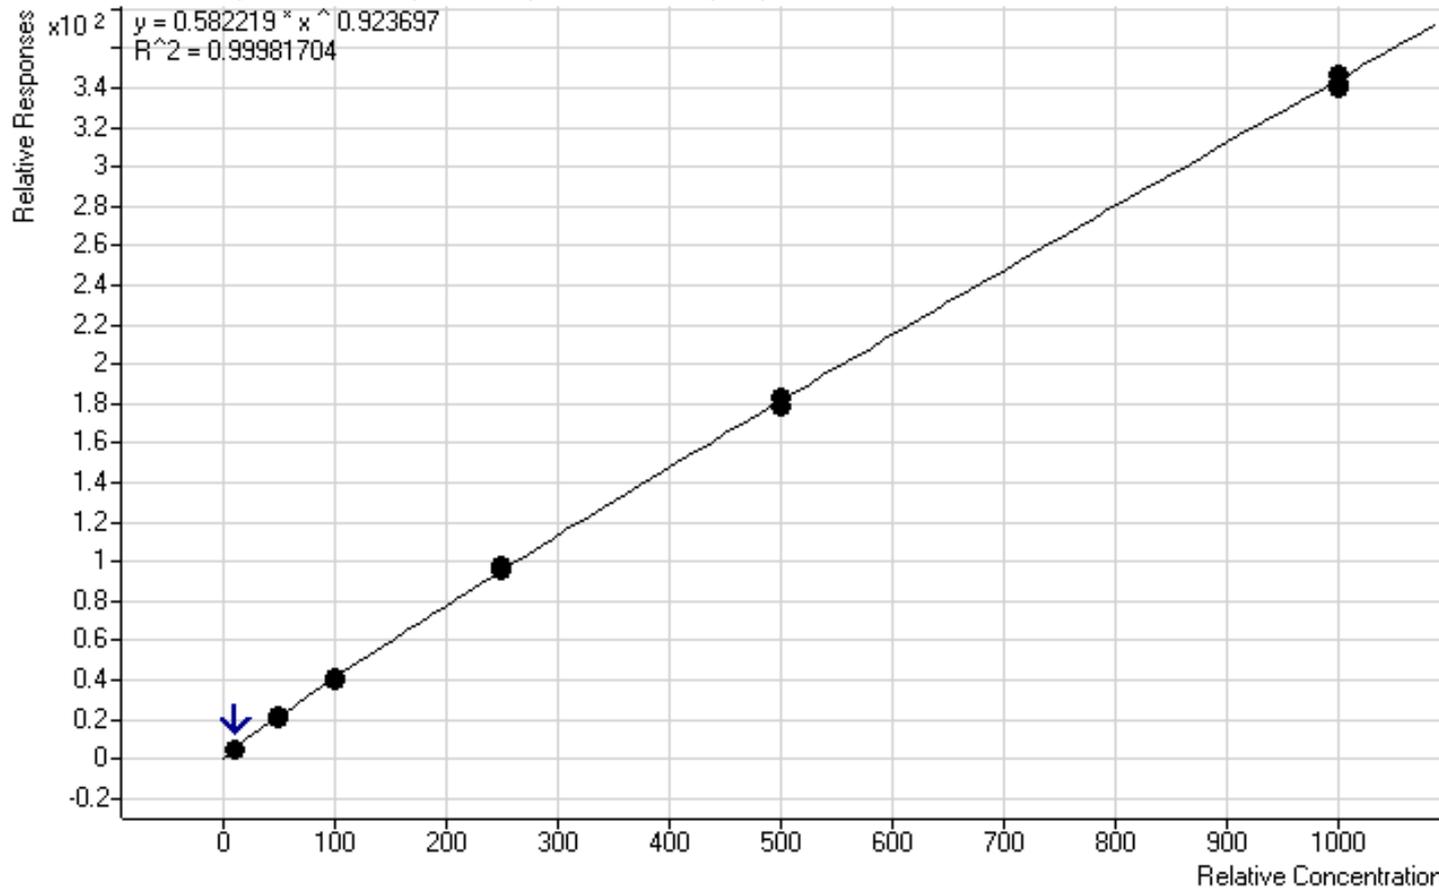

The Standard Curve

Isoleucine

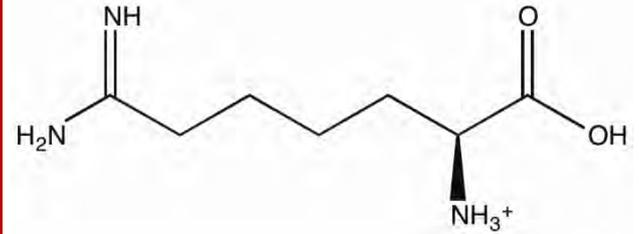

Curve fit: $1/x^2$

Isoleucine - 6 Levels, 6 Levels Used, 18 Points, 18 Points Used, 0 QCs

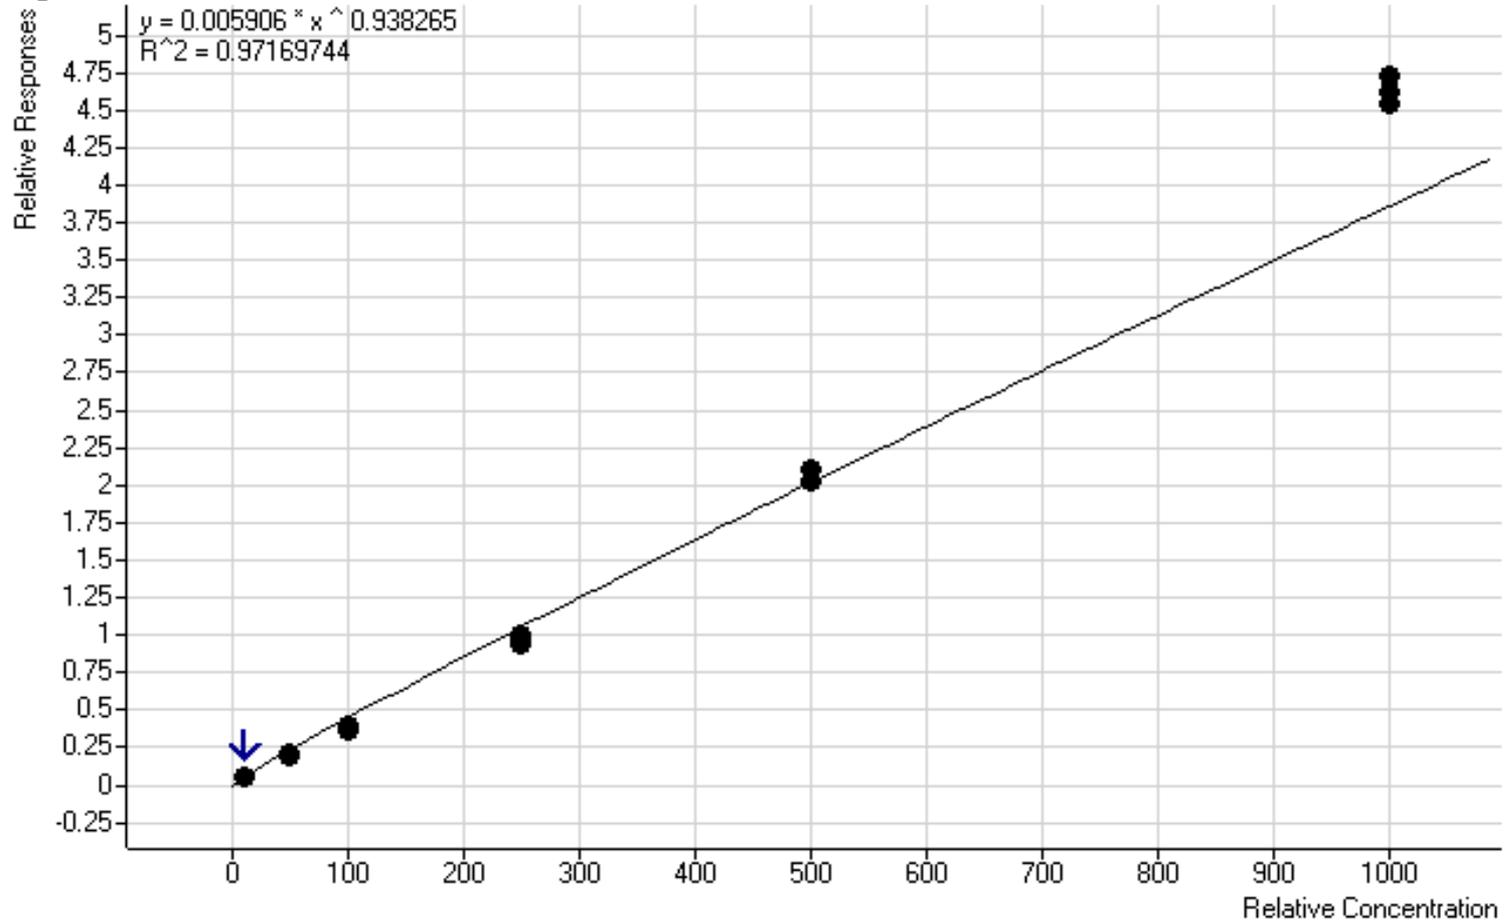

Arginine

Curve fit: $1/x^2$

Arginine - 6 Levels, 6 Levels Used, 18 Points, 18 Points Used, 0 QCs

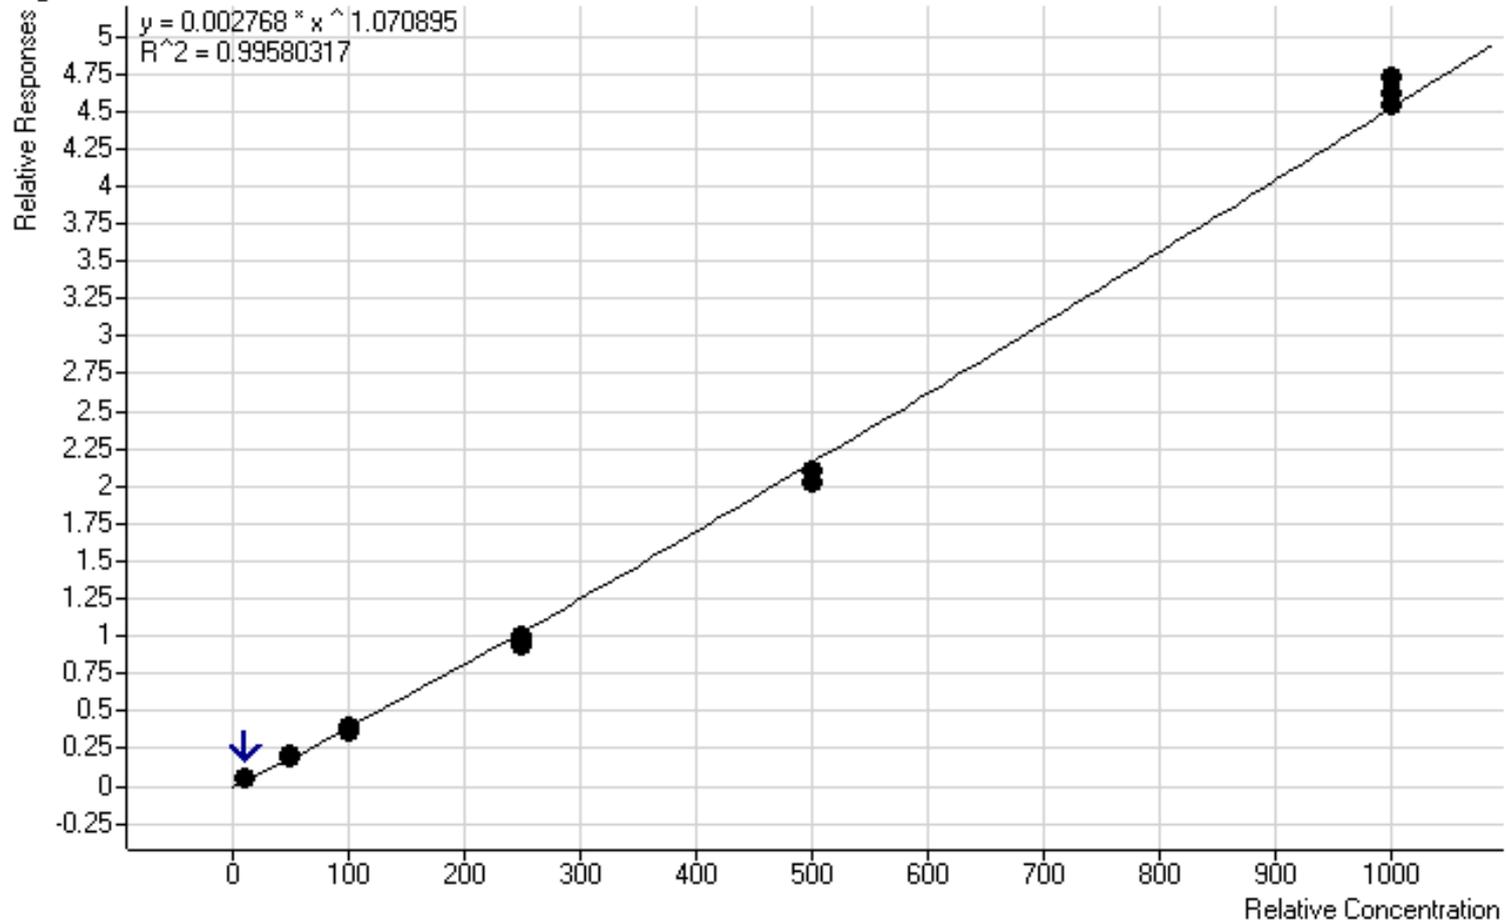

Arginine

Curve fit: 1/x

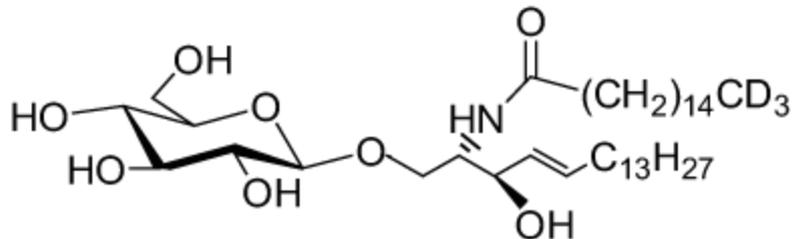

Arginine - 6 Levels, 6 Levels Used, 18 Points, 18 Points Used, 0 QCs

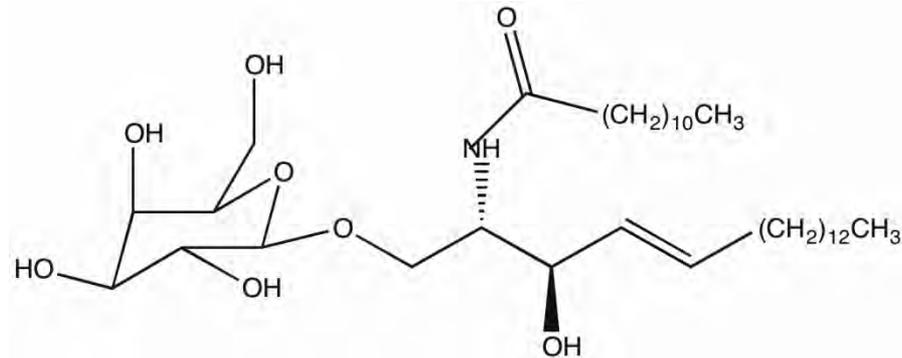

Lysosomal Enzyme Testing by MS/MS

Gaucher disease

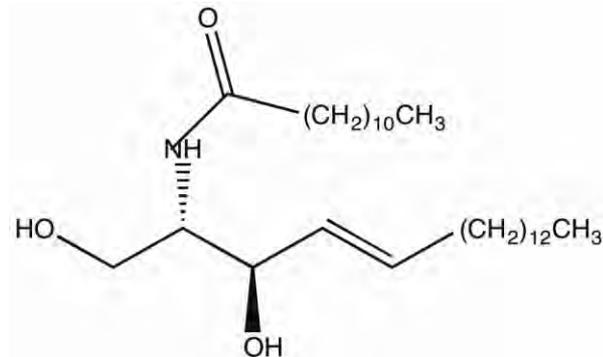

- ❑ Inherited deficiency of β -glucocerebrosidase
- ❑ Abnormal accumulation of lipids
- ❑ Enzyme replacement therapy
- ❑ Candidate for newborn screening?

Gaucher Disease Testing

Niemann-Pick A&B

MS/MS in the Clinical Lab:

Ongoing challenges

- **Sample prep**
- **Choice of standards**
- **Chromatographic conditions**
- **Ease of operator use**
- **Software**
 - ▣ **Clinical lab workflow**
 - ▣ **Peak review**
 - ▣ **Report generation, interface**
